SAN FERNANDO VALLEY / SANTA CLARITA VALLEY TRIENNIAL COMMUNITY HEALTH NEEDS ASSESSMENT

INTRODUCTION

Valley Care Community Consortium (VCCC) is pleased to present our sixth triennial community health needs assessment (CHNA). The 2013 edition of Assessing the Community's Health Needs: A Triennial Report on the San Fernando and Santa Clarita Valleys represents the collaborative efforts of several VCCC partner agencies including hospitals, clinics, schools, social service, government, community-based organizations, faith-based organizations, and most importantly, community residents. This joint regional effort of not-for-profit and public hospitals, as well as community-based agencies to assess the health and social needs of Service Planning Area 2 (SPA 2), which includes both valleys, began with a kick-off meeting in August, 2012 with 92 representatives from agencies servicing the residents of SPA 2 of Los Angeles County. In 1995, state community benefit legislation was passed (SB 697) that required non-profit health systems to complete community health needs assessments every three years. Additionally, in March of 2010 the Patient Protection and Affordable Care Act also added new requirements. VCCC is proud to say that our local non-profit hospitals and community-based organizations have collectively participated in a SPA 2 CHNA since 1997. The purpose of this report is to identify and analyze the unmet physical and mental health, social, and environmental needs within our service area. VCCC has taken the lead role in the compilation and completion of this shared document and is focused on collecting primary and secondary data to accurately reflect the current needs of SPA 2.

Formed in 1995 as an all-volunteer-based health collaborative, VCCC's project was to conduct an impact study on the closure of hospitals and clinics in the area and how that would affect the health care delivery system to the vulnerable. VCCC has evolved into the health and mental health-planning agency for SPA 2. Growing from our original eleven founders to over 250 members, VCCC is governed by a twenty member Board of Directors. In 2007, VCCC obtained a 501(c) (3) non-profit status. The CHNA, along with VCCC's vision and mission, drives the project and program development to address the needs identified in this report, and to serve the underserved populations residing in the San Fernando Valley (SFV) and Santa Clarita Valley (SCV). VCCC's vision statement is the motivating force behind all community-based collaborative projects and programs: "All residents of Service Planning Area 2 (SPA 2) of Los Angeles County will have access to a coordinated and comprehensive physical, mental, and environmental health systems to allow them to live and work as active participants in their communities." Without the numerous hours spent by the Board and VCCC partner agencies addressing issues such as diabetes/obesity, environmental health issues, access to health care, mental health, and many other health related concerns, several key accomplishments would not have been realized.

The report has been separated into six categories:

- 1 SPA 2 Overview
- 2 Key Findings: SPA 2 Priorities - Needs and Issues
- 3 Demographic Profiles
- 4 Key Disease Summaries
- 5 Health Care Access and Health Status
- 6 Other Relevant Community/Environmental Data

This 2013 report can also be found as an E-Book on our web site. Please go to www.valleyccc.org to download the E-Book, and to have access to City Snapshots. For additional information, please contact Joni Novosel (CHNA Coordinator) at 818-947-4040, or by email at jnovosel@dhs.lacounty.gov

ACKNOWLEDGMENTS

This effort would not have been possible without the financial support of Providence Health & Services (Holy Cross, Saint Joseph, and Tarzana Medical Centers). In addition to the financial support from these facilities, our additional SPA 2 partnering agencies sent staff to participate in the Key Informant interviews, focus group discussions, community forums, and completion of surveys required to prepare this document.

Many organizations and individuals contributed time, expertise, and resources for the completion of this project. Special thanks go to the students in the Health Education and Health Administration programs at California State University, Northridge (CSUN) who collected surveys for this project. Appreciation is also extended to Northridge Hospital for hosting the 2013 Needs Assessment Kick-Off Meeting and Valley Presbyterian Hospital for hosting the dissemination meeting. In addition, Providence Health and Services provided The Nielsen Company, Thomson Reuters 2012 estimates for demographic and disease prevalence data. The Los Angeles County Department of Public Health, Los Angeles County Department of Health Services and Los Angeles County Department of Mental Health provided data to VCCC, and Mid-Valley Comprehensive Health Center provided temporary office space for additional staff.

The participation and cooperation came in many different ways. Organizations assumed the responsibility of oversight of the development and completion of this project by participating actively at CHNA planning meetings. Acknowledgment and thanks go to the many collaborative partners for their support and assistance in the completion of the 2013 CHNA project.

Special thanks go to Shailen Mistry, President of Crystal Coding Concepts for working with VCCC staff to expand this report into the E-book format located at www.valleyccc.org.

This community health needs assessment was made possible by the dedicated work of VCCC staff, as well as community partners who worked diligently on data collection and analysis. The following individuals played a vital role in the development of the 2013 edition of “Assessing the Community’s Health Needs: A Triennial Report on the San Fernando and Santa Clarita Valleys”

Ronald Sorensen	Providence Health and Services Center for Community Health Improvement	Data Committee Chair
Gigi Mathew	Los Angeles County Department of Public Health, Office of Health Assessment and Epidemiology (OHAE)	Data & Editing Committee
Dr. Douglas Melnick	Los Angeles County Department of Public Health, SPA 1 & 2	Data & Editing Committee
Hsin-I Chen	Tarzana Treatment Center	Data Committee
Marie Mayen-Cho	Providence Health and Services Center for Community Health Improvement	Data Committee

Regan Maas	Department of Geography, California State University, Northridge	Data Committee & Mapping
Surekha Vasant Scott Brumer	Valley Care Community Consortium Business Consultant	Editing Chair Editing Committee
Joni Novosel Maribel Aguilar	Valley Care Community Consortium Valley Care Community Consortium	CHNA Coordinator Needs Assessment Staff

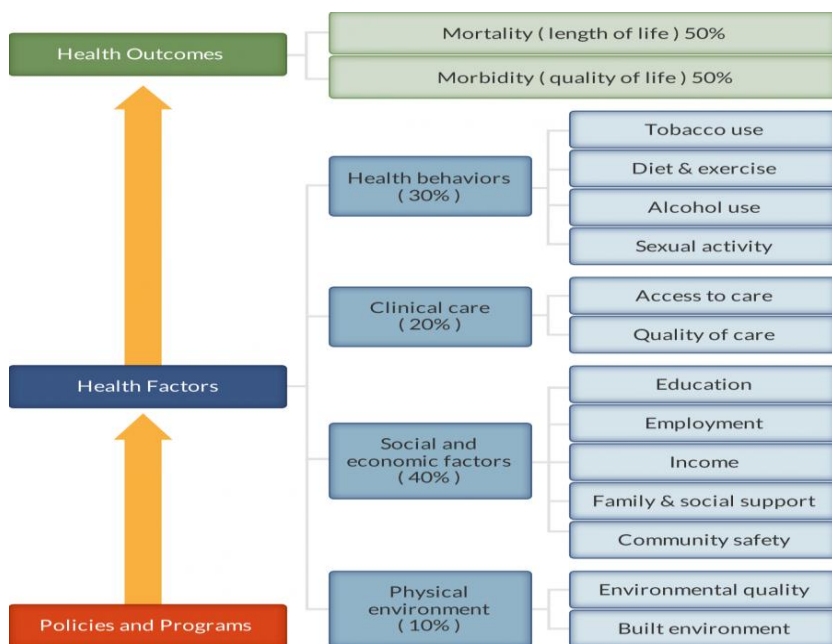

CHNA Support Staff – The following VCCC Public Health and Health Administration undergraduate and graduate interns helped the VCCC staff with gathering information and creating tables for various sections of this report.

Kenia Alcaraz	Valley Care Community Consortium	Spring Intern
Belen Arangure	Valley Care Community Consortium	Summer Intern
Hannah Duvivier	Valley Care Community Consortium	Summer Intern
Raymond Fernandez	Valley Care Community Consortium	Fall Intern
Ines Herrera	Valley Care Community Consortium	Summer Intern
Pallavi Moto	Valley Care Community Consortium	Spring Intern
Shivani Ponnabalavanan	Valley Care Community Consortium	Spring Intern
Mayra Quijano	Valley Care Community Consortium	Spring Intern
Natalie Rocha	Valley Care Community Consortium	Spring Intern
Gabriela Santiaguillo	Valley Care Community Consortium	Spring Intern

ASSESSMENT METHODOLOGY

The Patient Protection and Affordable Care Act (ACA) enacted on March 23, 2010, added new requirements, which nonprofit hospital organizations must satisfy to maintain their tax-exempt status under section 501(c) 3 of the Internal Revenue Code. One such requirement added by ACA, Section 501(r) of the Code, requires nonprofit hospitals to conduct a Community Health Needs Assessment (CHNA) at least once every three years. As part of the CHNA, each hospital is required to collect input from designated individuals in the community, including public health experts as well as members, representatives or leaders of low-income, minority, and medically underserved populations and individuals with chronic conditions. The CHNA process undertaken in 2013 and described in this report is conducted in compliance with these new federal requirements.

VCCC's overarching aim and main objective in creation of this report is to identify and prioritize unmet community health needs. More importantly this report will act as the foundation to create a community wide plan, efforts to coordinate and create potential collaborative projects and activities to promote and improve the health of all individuals residing in SPA 2.

County Health Rankings model ©2012 UWPHI

The SPA 2 CHNA was conducted using the Mobilizing Action Toward Community Health (MATCH) methodology. This process allowed for a more in-depth review and analysis of some of the critical health issues facing SPA 2.

The findings of this CHNA serve as a chronology and index of health needs and issues prevalent among population groups, including children, adults, elderly, poor/low income, and medically indigent/uninsured. Similar to the previous community health needs assessment studies, this project focused on collecting both primary and available secondary data that were relevant to the purpose of the investigation.

The CHNA survey instrument used in 2010 was slightly modified to collect 2013 primary data. During the CHNA kickoff meeting in August 2012, agency representatives brainstormed to identify areas of concern according to the current trends in the communities they served. The identified concerns were then used in the

questionnaires for surveys and community forums.

Primary data are new data collected directly from first-hand experience. They are typically qualitative (not numerical) in nature. For this community health needs assessment, primary data were collected through key informant interviews, focus groups and community forums with community stakeholders. Primary data describe what is important to the individuals who provide the information and are useful in interpreting secondary data.

In addition, between September 2012 through June 2013 focus groups, paper and online surveys, and community forums were conducted in both English and Spanish. Please see the primary data collection instruments, which are included in the appendices of this report under **Appendix D**.

VCCC conducted key informant interviews with individuals having public health experience, agency representatives who have provided services to low-income and uninsured populations, and individuals from local government agencies. A total of 30 key informant interviews were conducted for this report. Each interview lasted between 30 to 45 minutes. The key informants included individuals from Los Angeles County health services, mental health and public health departments, academia, community clinics, hospitals, and LA school district staff. The informants have public health expertise or provide services for low-income, uninsured families in SPA 2. For key informant interview questionnaire please refer to **Appendix D**.

In addition, VCCC worked with local faith-based, school-based, and community agencies to conduct several community forums. Six one hour community forums with 268 participants were conducted using the TurningPoint Technology response system; where participants used a remote control clicker to answer questions. A PowerPoint survey was created on the TurningPoint Technology response system and each participant was given a clicker for responding. This system helped VCCC to gather real time responses from participants.

Utilizing a focus group facilitation guide, VCCC conducted ten one hour focus groups with 91 community members, leaders, and service providers. Four of the ten focus groups were conducted in Spanish. For a copy of the facilitation guide and focus group questions, please refer to **Appendix D**.

In both English and Spanish a total of 567 surveys (both paper and online) were administered to participants consisting of public health professionals, health care providers, community residents, parent groups from Los Angeles Unified School District (LAUSD) and CSUN students.

Secondary data are data that have been collected and published by another entity. They are typically quantitative (numerical) in nature. Secondary data are helpful in highlighting in an objective manner health outcomes that significantly impact a community.

Secondary data was collected using credible sources including the Los Angeles County Department of Public Health, national disease association websites, state, national websites and World Health Organization website. Most of the information gathered was in the electronic format. For a comprehensive list of resources used, please refer to **Appendix E**.

Information Gap

Primary and secondary data gathering in SPA 2 generated an abundance of information. However, there were gaps when issues were identified by the community residents and no local data was available. Additionally, some data was not available for analysis by race and ethnicity at the zip code level.

Residents of SFV completed a greater percentage of surveys compared to SCV residents.

CITY SNAPSHOT

City specific data can be found on the VCCC website under City Snapshot. The purpose of creating a City Snapshot is to facilitate the process of compiling specific information about each SPA 2 community. The web-based City Snapshot includes demographic data, education levels, income levels, disease trend and prevalence for each city in SPA 2. The notion for this online resource came from the city profiles found on the Los Angeles Times web site. Data on this site will be compiled from the 2012 Claritas projections, and will be updated by the end of November, 2013.

This information can be accessed through the VCCC website, www.valleyccc.org.

SERVICE PLANNING AREA 2 (SPA 2) OVERVIEW

SPA 2 Description

SPA 2 encompasses 999.24 square miles, and covers the zip codes in the SFV and SCV of Los Angeles County. SPA2 is the most populous of the eight service planning areas in the County of Los Angeles consisting of over two million people. SPA 2 consists of forty communities, ten of which are incorporated cities. In the SFV, SPA 2 extends from Sylmar/Tujunga to the north, Agoura Hills/Calabasas to the west, Glendale/Burbank to the east, and Studio City/Sherman Oaks/Encino/Tarzana to the south. The SCV borders the SFV to the north, and includes the communities of Canyon Country, Castaic, Newhall, Saugus, Stevenson Ranch, and Valencia.

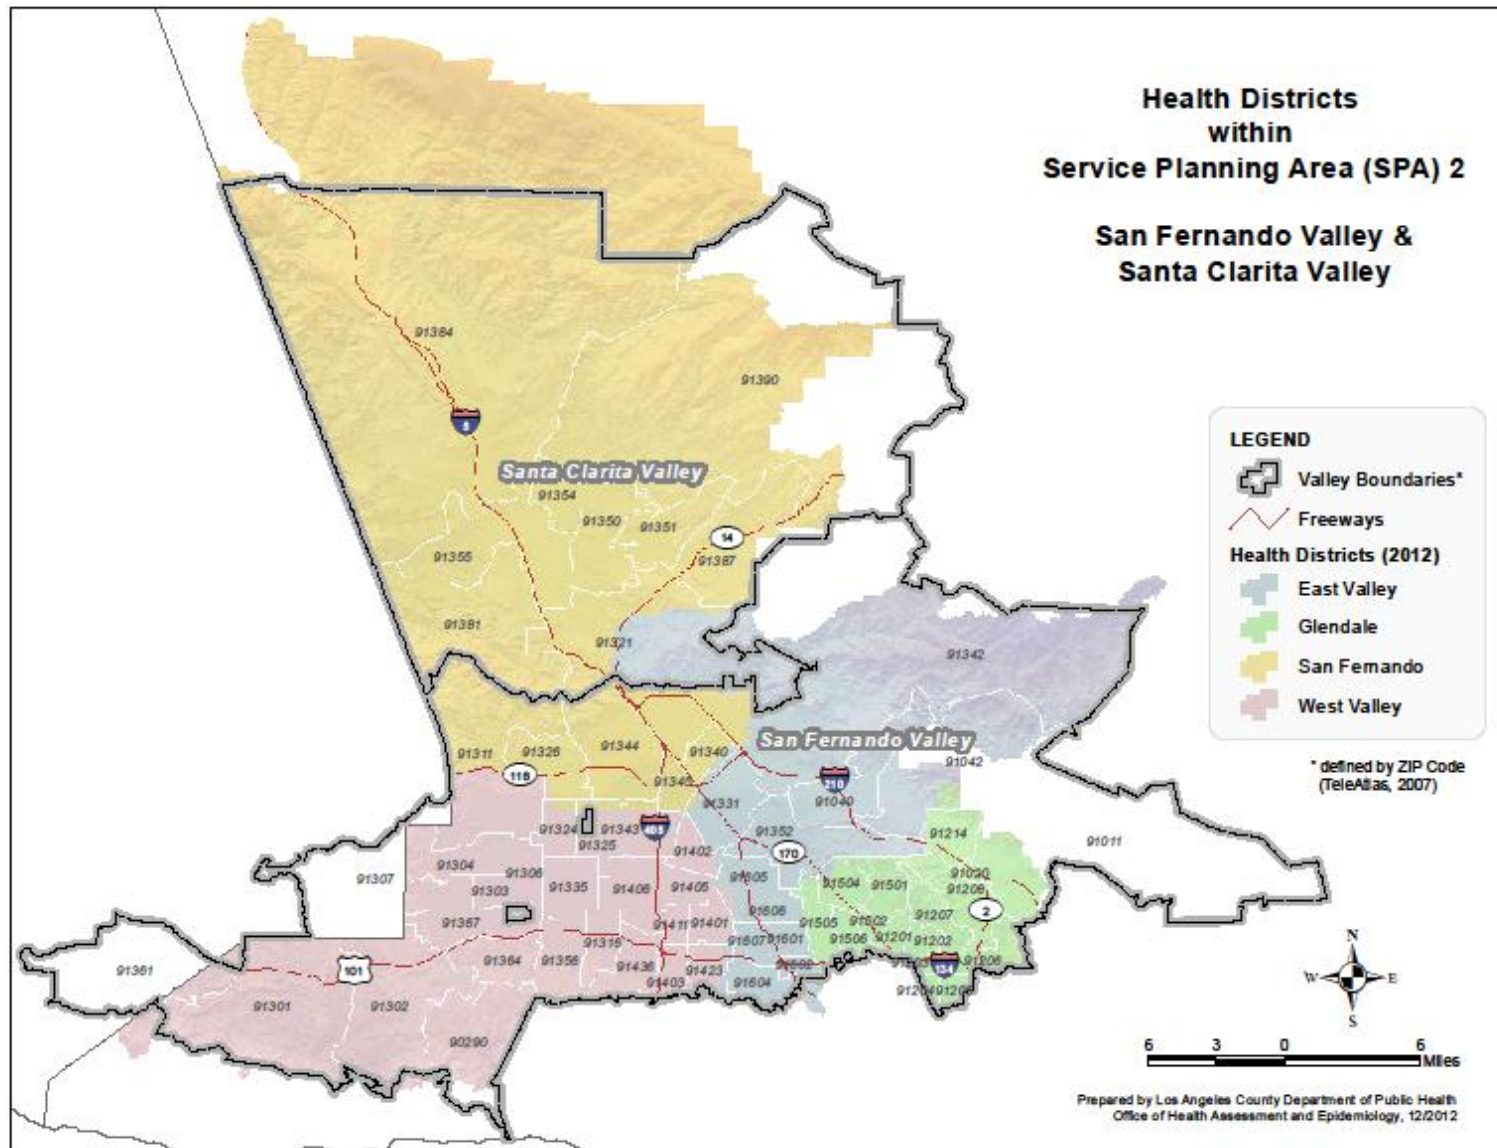

Based on the July 1, 2011 population estimates prepared for Urban Research, LA County ISD (released 10/15/12), the population for SPA 2 is 2,136,581. SPA 2 population estimates have decreased slightly from 2,185,024 in 2009 to 2,136,581 in 2011.

Los Angeles County	9,866,194
SPA 2 San Fernando*	2,136,581
SPA 3 San Gabriel	1,752,126
SPA 8 South Bay	1,528,363
SPA 7 East	1,295,828
SPA 4 Metro	1,120,091
SPA 6 South	1,009,550
SPA 5 West	637,129
SPA 1 Antelope Valley	386,526

Source: July 1, 2011 Population Estimates, prepared for Urban Research, LA County ISD, released 10/15/2012

*The official name for SPA 2 is San Fernando; however, SPA 2 consists of both SFV and SCVs.

Eight service planning areas were created to serve as the basic geographical organization units for various LA County departments including public health and community health services. Within SPA 2, there are four health districts including East Valley, Glendale, San Fernando, and West Valley (for the actual geographic boundaries of SPA 2, please see the map on the next page). According to the Los Angeles County Department of Public Health (LAC DPH), the geographic boundaries of the health districts correspond to the Census Tract boundaries established by the Census Bureau, and not the United States Postal Service zip codes. For this report, the data will be reported one of two ways: either by zip code based on the United States Postal Service with the understanding that some of the zip codes may span into other health districts, or by census tract boundaries grouped by health district.

* P.O. Box Codes = Zip code is for specific P.O. Box

** Unique= Zip code is used for a specific company or organization (Example Cal State Northridge Campus 91330)

KEY FINDINGS: SPA 2 PRIORITY NEEDS AND ISSUES

Prioritized Needs for SPA 2

Community Feedback on Health Needs and Issues

A total of 30 key informant interviews, 10 focus groups, 6 community forums and 567 surveys were conducted to gather information from the community. Participants included individuals from Los Angeles County (LAC) Dept. of Health Services, LAC Dept. of Public Health, LAC Dept. of Mental Health, community agencies, health care providers, mental and oral health providers, local churches, schools, parent groups, clinic patients, leaders, public health experts, academia, city, and county officials. This provided VCCC with a wide range of individuals who have experience with providing services to the low-income, uninsured population of the SFV and SCV.

To identify the top 10 health care needs, primary data was collected for the most significant health problems in the community, which contribute towards social and economic issues faced by the community, and unhealthy behaviors in SPA 2. In addition, each group was asked to rank the top ten immediate health issues facing them personally, and the community as a whole. Twenty five key needs rose to the top; issues included multiple types of chronic disease and cancer. During the prioritization process, it was determined that identified chronic diseases and would be combined into one issue. The top ten priority needs were assessed based on a point value based on highest to lowest need. The cumulative value of each community need was calculated, and prioritized by the total points received. The following is the list of the top ten concerns identified by the community members in SPA 2.

1. Chronic Diseases (management, treatment and prevention of diabetes, heart disease, stroke, hypertension and asthma)
2. Cancer (all types)
3. Access to Care
4. Obesity
5. Mental Health
6. Oral Health
7. STDs
8. Aging Issues (older adults)
9. Teen Pregnancy
10. Housing and Homelessness

The health of the community is the result of many inter-related factors. The economy, unemployment, a lack of full time employment, reduced pay, and the lack of employer based health care have been key concerns for community residents, and community experts. The

overall consensus has been that many issues such as obesity, chronic disease, and depression could be the result of stress that comes from being part of the “working poor” population.

The following information provides a summary for each of the prioritized health needs.

Chronic Diseases (Diabetes, Heart Disease, Stroke, Hypertension and Asthma)

The World Health Organization defines chronic diseases as “*Chronic diseases are diseases of long duration and generally slow progression. Chronic diseases, such as heart disease, stroke, cancer, chronic respiratory diseases and diabetes, are by far the leading cause of mortality in the world*” (WHO: Chronic Diseases, 2011)².

Diabetes

Picture Source: CDC: 2013

Nationally there is an increase in the incidence of Type II Diabetes in both adults and youth. This has been directly associated with the rising rates of overweight and obesity in the United States. The Centers for Disease Control and Prevention define diabetes as “A group of diseases marked by high levels of blood glucose (a fasting blood sugar level ≥ 126 milligrams per deciliter (mg/dL) after an overnight fast, or a 2 hour blood sugar level ≥ 200 mg/dL after a 2-hour oral glucose tolerance test (OGTT), or an A1c level ≥ 6.5 %) resulting from defects in insulin production, insulin action or both” (CDC: 2011 National Diabetes Fact Sheet)³.

There are three types of diabetes: Type I where the pancreas produces little or no insulin. Type II diabetes is where the body becomes resistant to insulin. The final type of diabetes is called Gestational Diabetes where women without previously diagnosed diabetes develop high blood sugar during pregnancy. Type II is the most common diabetes and accounts for over 90% of all diabetes cases. Obesity is the risk factor for type II diabetes (Los Angeles County Department of Public Health, Office of Health Assessment and Epidemiology, Trends in Diabetes: A Reversible Public Health Crisis, LA Health, November, 2010)⁴.

Diabetes and obesity continues to be a concern, along with hypertension and heart disease. Many of the participants suggested that lack of knowledge about proper nutrition as one of the major contributing factors to obesity. It was suggested that an emphasis on health education will help empower individuals to make healthier food choices. The total estimated cases of diabetes in the SFV represent 6.8% (125,673) of the total population. In the SCV, the estimated cases of diabetes represent 6.4% (18,071) of the total population (The Nielson Company & Thomson Reuter, Disease Estimates, 2012)⁵.

Heart Disease

Cardiovascular disease is a leading cause of death in the U.S. Cardiovascular disease includes various heart diseases and stroke. Coronary heart disease, one of the most common heart diseases, causes more than half of all the heart disease deaths in the United States. Coronary artery disease occurs when the arteries that supply blood to the heart are blocked by a waxy, fat like substance called plaque. Plaque gradually builds up and narrows the artery leading to atherosclerosis (CDC: Heart Disease and Stroke, 2012)⁶.

Risk factors for cardiovascular disease (heart disease and stroke) include high blood cholesterol, high blood pressure, diabetes, tobacco use, overweight, obesity, poor diet, and lack of physical activity, alcohol use, family history, age, gender and ethnicity.⁶

The total estimated cases of coronary heart disease in the SFV represent 3.0% (55,674) of the total population. In the SCV, the estimated cases of coronary heart disease represent 2.8% (7,890) of the total population.⁵

Picture Source: National Heart, Lung, and Blood Institute, NIH: What is Coronary Heart Disease? 2012⁷.

Stroke

A stroke, also called a “brain attack,” occurs when a clot blocks the blood supply to part of the brain or when a blood vessel in or around the brain bursts. In either case, parts of the brain become damaged or die. An ischemic stroke is when blood vessels that feed the brain are blocked due to a blood clot. When the supply of blood is blocked from part of the brain, the brain cell will begin to die. The result of a stroke will be the inability to carry out daily living activities (CDC: About Stroke, December, 2013)⁹.

Stroke is the fourth cause of death and leading cause of adult disability in the United States. A hemorrhagic stroke is when the blood vessels within the brain rupture often caused by uncontrolled hypertension. Often the effects of stroke are permanent, especially if the patient is not immediately taken to a hospital for treatment and if numerous brain cells die due to lack of blood and oxygen flow in the brain. In some cases, injured cells may repair themselves with time, allowing some body function to improve (American Heart Association: About Stroke, October, 2012)¹⁰.

Picture Source: CDC, About Stroke, 2011

The total estimated cases of stroke in the SFV represent 1.9% (35,475) of the total population. In the SCV, the estimated cases of stroke represent 1.8% (5,061) of the total population⁶.

Hypertension or High Blood Pressure

Blood pressure is the force of blood against the artery walls as it circulates through the body. Blood pressure normally rises and falls throughout the day, but it can cause health problems if it stays high for a long period of time. Having high blood pressure raises the risk for heart disease and stroke - the leading causes of death in the United States (CDC: High Blood Pressure, May, 2013)⁷.

High blood pressure is called the "silent killer" because many people do not realize that they have high blood pressure. High blood pressure often has no warning signs or symptoms⁷.

The total estimated cases of hypertension in the SFV represent 20.8% (386,186) of the total population. In the SCV, the estimated cases of hypertension represent 20.2% (56,580) of the total population⁵.

Picture Source: CDC, High Blood Pressure, May, 2013

Asthma

The U.S. Department of Health & Human Services defines asthma as a chronic lung disease that inflames and narrows the airways, thus causing the airways to get swollen and sensitive. When the airways get swollen, less air flows through the lungs making it harder to breathe. Even though the causes of asthma are often unknown, some of the signs or symptoms are heavy coughing in the morning or evening, chest tightness and shortness of breath (National Heart, Lung, and Blood Institute, NIH: What is Asthma, 2012)¹².

Risk factors for asthma include the development of allergies, family history of asthma, or if the individual has experienced respiratory infections, airborne allergens or exposure to irritants such as tobacco smoke during childhood. If Asthma is common in the family then some of these risk factors might make the airways more sensitive to pollutants in the air¹².

Community members identified asthma as one of the top health issues that need immediate intervention. They reported concerns regarding the air quality, and high levels of air pollution that is contributing to the high number of asthmatic episodes in their children. The total estimated cases of asthma in the SFV represent 8.7% (161,578) of the total population. In the SCV, the estimated cases of asthma represent 8.7% (24,283) of the total population⁵.

Cancers

SPA 2 community members ranked cancer as their second most prominent health care concern. While community members identified all forms of cancer as being a concern, breast cancer was ranked the highest. The lack of health insurance and the change in the age requirement for breast cancer screenings have made it harder for women to receive free breast cancer screenings in many SPA 2 communities. More often than not, participants discussed the difficulty with accessing screenings for colorectal cancer and breast cancer compared to other forms of cancer.

Breast Cancer

The National Institute of Health's Cancer Institute defines breast cancer as a cancer that forms in the tissues of the breast, usually in milk ducts and glands that produce milk. Even though breast cancer can occur in both women and men, it occurs rarely among the male population.

Some of the breast cancer risk factors include obesity, alcohol consumption, and family history of breast cancer. The risk factors for breast cancer can be reduced by early pregnancy, breastfeeding, and regular exercise. Breast cancer can be detected by a routine mammograms screening (breast cancer test). Screening mammography for women between the ages of 40 to 70 years significantly reduces breast cancer mortality (National Cancer Institute, What You Need to Know about Breast Cancer, 2012)¹³.

The total estimated cases of breast cancer in the SFV represent 1.0% (17,638) of the total population. In the SCV, the estimated cases of breast cancer represent 0.9% (2,443) of the total population⁵.

Cervical Cancer

According to the National Cancer Institute (NCI), cervical cancer occurs in the tissue of the cervix (the organ connecting uterus and vagina). This slow-growing, symptomless cancer can be detected by a Pap smear test. Human Papilloma Virus (HPV) almost always is the cause of cervical cancers. It is estimated that 12,170 new cases of cervical cancer have been reported in 2012 in the U.S with 4,220 deaths caused by cervical cancer (NCI, What You Need to Know about Cervical Cancer, 2012)¹⁴.

Most common risk factor for cervical cancer is HPV infection; risky behaviors such as smoking can increase the risk for cervical cancer. Cervical cancer risk can be decreased by getting regular screening tests (Pap smear) or receiving HPV vaccination¹⁴.

Picture Source: CDC: Cervical Cancer, 2012

The total estimated cases of cervical cancer in the SFV represent 0.4% (7,718) of the total population. In the SCV, the estimated cases of cervical cancer represent 0.4% (1,210) of the total population⁵.

Colorectal Cancer

The National Cancer Institute (NCI) describes colon cancer as a cancer that develops in the tissue of the colon, the longest part of the large intestine. Most colon cancers start in cells that produce and release mucus and other fluids. Rectal cancer forms in the tissue of the rectum, the last part of the large intestine closest to the anus. A cancer that starts at either of these areas is known as colorectal cancer.

The risk factors for colorectal cancer include family history, being 50 years or older, and polyps in colon or rectum. Even though most polyps are non-cancerous, some can and do become cancerous. Other risk factors that were identified were a personal history of cancer, an unhealthy diet, and smoking tobacco (NCI, What You Need to Know about Colorectal Cancer, 2012)¹⁵.

The total estimated cases of colorectal cancer in the SFV represent 0.3% (6,225) of the total population. In the SCV, the estimated cases of colorectal cancer represent 0.3% (877) of the total population⁵.

Lung Cancer

Lung cancer is the leading cause of cancer death, and the second most diagnosed cancer in both men and women in the United States. Lung cancer begins in the lungs and may spread to lymph nodes or other organs in the body, such as the brain. Cancer from other organs also may spread to the lungs. When cancer cells spread from one organ to another, the process is referred to as *metastases*.

Lung cancers are grouped into two main types called small cell and non-small cell cancers. Non-small cell lung cancer is more common than small cell lung cancer.

Lung cancer also can be caused by using other types of tobacco (such as pipes or cigars), breathing secondhand smoke, being exposed to substances such as asbestos or radon at home or work, and having a family history of lung cancer (CDC: Basic Information about Lung Cancer, 2013)¹⁶.

The total estimated cases of lung cancer in the SFV represent 0.1% (2,452) of the total population. In the SCV, the estimated cases of lung cancer represent 0.1% (346) of the total population⁵.

Picture Source: CDC, 2013

Prostate Cancer

Prostate cancer is the most common cancer among men in the United States. It is one of the leading causes of cancer deaths among men of all ethnicities. Prostate cancer forms in the tissues of the prostate - a gland in the male reproductive system found below the bladder and in front of the rectum. Prostate cancer generally occurs in older men (CDC: Basic Information about Prostate Cancer, 2013)¹⁷.

The total estimated cases of prostate cancer in the SFV represent 0.6% (11,874) of the total population. In the SCV, the estimated cases of prostate cancer represent 0.6% (1,735) of the total population⁵.

Uterine Cancer

Uterine cancer forms in the tissue of the uterus (the small, hollow, pear-shaped organ in a woman's pelvis in which a fetus develops). The two types of uterine cancers are endometrial cancer (cancer that begins in cells lining of the uterus), and uterine sarcoma (a rare cancer that begins in muscle or other tissues in the uterus). Uterine cancer is the fourth most common cancer among women in the United States (CDC: Uterine Cancer, 2013)¹⁸.

The total estimated cases of uterine cancer in the SFV represent 0.3% (4,572) of the total population. In the SCV, the estimated cases of uterine cancer represent 0.2% (648) of the total population⁵.

Access to Primary Care

Access to primary care affects individuals of all ages and ethnicities in many SPA 2 communities. Health providers for children ages 0-5 years reported that there is a lack of pediatricians and pediatric specialists in SPA 2. Likewise, health care providers for the elderly discussed the lack of gerontologists, and the lack of coordinated services for the elderly. During focus groups and key informant interviews, health professionals reported that access to primary care is a major health care need in their communities. Lack of medical homes was a topic of discussion in these focus groups by the health professionals. On the other hand, community members were unsure and concerned about the changes the Patient Protection Affordable Care Act (PPACA) will bring and its impact on them. Many of the residents discussed the barriers of accessing primary care without health insurance, and their inability to pay out-of-pocket to see a primary care doctor.

The health care providers for the elderly discussed the multitude of issues they face with their elderly population on a daily basis including non-compliance with prescription medication, no show rates, trust issues, and difficulties having the elderly reach out to them for services. In addition, they discussed the large number of elderly needing mental health services that are not available or accessible to them. Access to care included not only physical health but also mental health services. Furthermore, other elderly services such as in-home care, low cost medication, and the coordination of prescribed medicines are challenges. One of the participants said “*Some doctors do not take the time to see what other medicines this person is on, to see if the medicines he/she is prescribing do not have*

adverse effects. They don't explain why the patient needs to take the medicines they are prescribing. Our older patients do not either understand the need to take all these pills, or they forget to take the new ones the doctor gave them. This is a big problem. Because they don't take the meds correctly, they don't feel good or continue to have the same problems. We need coordinated care from all the doctors these elderly patients see.”

“Limited English proficiency” also poses a barrier to healthcare services. In the SFV, the communities with highest number of population that speaks a language other than English include Pacoima (84.6%), Panorama City (82.5%), Sun Valley (80.0%) and San Fernando (79.0%). In the SCV, Newhall (42.3%), Canyon Country (37.5%), and Stevenson Ranch (32.6%) have the highest percent of population that speaks language other than English⁵. Communication gaps, inability to discuss personal health issues with physicians, were discussed as barriers to health care access, by community members.

Health Care Access	East Valley		Glendale		San Fernando		West Valley	
	Adults	Children	Adults	Children	Adults	Children	Adults	Children
Percentage who do not have health insurance	38.1%	4.3%	27.4%	6.6%	16.1%	2.8%	26.9%	4.3%
Percent who do not have dental insurance	57.3%	23.0%	48.3%	21.0%	39.5%	19.5%	50.2%	23.5%
Percent who do not have regular source of care	24.3%	6.5%*	27.9%	-	13.9%	3.4%*	24.3%	2.8%*

-For purposes of confidentiality, results with cell sizes less than 5 are not reported.

Obesity

A September 2012 article by the Los Angeles County Department of Public Health (LAC DPH) on the “Trends in Obesity: Adult Obesity Continues to Rise,” reports that “Over the past decade, the obesity epidemic has emerged as one of the most significant public health threats in Los Angeles County and across the nation” (Los Angeles County Department of Public Health, Office of Health Assessment & Epidemiology, Trends in Obesity: Adult Obesity Continues to Rise, September 2012)²⁰.

According to the World Health Organization (WHO), overweight or obesity is an accumulation of excess body fat that affects a person’s overall health. Overweight and obesity is calculated by using the Body Mass Index (BMI), where the weight of the person (in kilograms) is divided by the square of their height (in meters). Overweight is defined as having a BMI equal to or more than 25, and obesity is where the BMI is over 30 (WHO, Obesity and Overweight Fact Sheet, 2012)²¹.

Overweight and obesity are the most preventable health problems and causes of Type II diabetes, which could potentially lead to other chronic diseases such as heart disease, stroke, arthritis and many forms of cancers. Obesity and overweight are not only prevalent

among adults, but also children. According to the “Trends in Obesity: Adult Obesity Continues to Rise” published by the LAC DPH, in the year 2011, about 23.6% of the adults (18 years or older) in Los Angeles County were obese¹⁹.

Overweight, obesity and physical activity percentages in SPA 2 are as follows¹⁹:

- 19.8% of children in grades 5, 7, 9 who are obese (BMI above the 95th percentile)[#]
- 21.1% of adults are obese (BMI \geq 30.0)
- 36.4% of adults are overweight ($25.0 \leq$ BMI $<$ 30.0)
- 12.8% of adults are inactive (do not participate in any aerobic activity)
- 11.0% of children ages 6-17 years are inactive

Source: Data obtained from the 2010 California Physical Fitness Testing Program, California Department of Education.

At the health district level in SPA 2, the percentage of adults who reported eating fast foods at least once per week are 36.5% in the East Valley, 36.7% in Glendale, 34.6% in San Fernando and 40.9% in West Valley. The percentage of adults that are obese in the East Valley is 19.2%, 21.0% in Glendale, 24.9% in San Fernando and 20.1% in the West Valley. In addition, 35.5% of the East Valley, 35.1% of Glendale, 35.1% of San Fernando and 38.2% of the West Valley adults are overweight¹⁹.

Mental Health

Mental health is a key driver of health status. Economic and social insecurity often are associated with poor mental health. Poverty, unemployment, heavy alcohol and tobacco consumption, and physical inactivity affect mental health as well. The total estimated cases of depression and anxiety in the SFV represent 8.7% (160,559) of the total population. In the SCV, the estimated cases of depression and anxiety represent 8.4% (23,560) of the total population⁵.

During a focus group, a senior peer counseling group discussed the mental health issues of the elderly, the group reported that stress, isolation, loss of a loved one, loss of independence, and trust issues are major contributors to anxiety and depression among the elderly population.

SPA 2 depression and anxiety percentages are as follows:¹⁹

- 13.9% of adults were ever diagnosed with depression
- 8.9% of adults with current depression
- 12.0% of adults at risk for major depression
- 12.5% of adults ever diagnosed with anxiety
- 7.2% of adults with current anxiety

Community members discussed the various causes for depression including elder abuse, child and domestic abuse, lack of employment, stress, peer pressure, violence against women, lack of access to health and mental health care, and falling under 100% of the Federal Poverty Level (FPL). The mental health issues for children include ADHD, ADD, as well as financial, social and family-related stressors that impact school performance and overall social well-being.

Dental Health

The Centers for Disease Control and Prevention reports that approximately 40.0% of adults in poverty ages 20 years or more were identified as having at least one untreated decayed tooth compared to 16.0% of adults not living in poverty. In the past decade, the percent of adults 60 years or older now missing all their teeth has decreased from 31.0% to 25.0% (CDC, Oral Health, 2012)²².

Risk factors can be reduced by drinking fluoridated water, avoiding tobacco, limiting alcohol, healthy eating, and regular dental checkups including teeth cleaning (CDC, Oral Health for Adults: Fact Sheet, 2012)²³.

Health district data for SPA 2 show that 35.2% of adults in the East Valley, 33.0% in Glendale, 21.1% in San Fernando and 30.5% in the West Valley were unable to obtain dental care (including regular checkups) because they could not afford it. In addition, 57.3% of adults and 23.0% children in the East Valley, 48.3% adults and 21.0% of children in Glendale, 39.5% of adults and 19.5% of children in San Fernando, 50.2% of adults and 23.5% children in the West Valley do not have dental insurance¹⁹.

STDs

According to the World Health Organization (WHO), sexual transmitted infections or sexually transmitted diseases (STI/STDs) are spread from person to person by sexual contact. Common STD causing bacteria include gonorrhea, chlamydia, and syphilis. Common sexually transmitted viral infections include HIV, genital herpes, genital warts, and hepatitis B. A common sexually transmitted parasitic infection is vaginal trichomoniasis, while yeast can cause vulvovaginitis in women, and inflammation of the penis glans, balanitis in men.

Some STDs are a-symptomatic. However, if STD's are untreated they can lead to serious health consequence including infertility in women and health complications in newborns. Safe sexual practices help prevent STD spread. The use of condoms prevents HIV and other sexually transmitted infections including, gonorrhea, chlamydia, syphilis and trichomoniasis while decreasing the risk of transmission of syphilis or herpes (WHO: Sexually Transmitted Infections, 2011)²⁴.

According to the 2011 STD rates (per 100,000 population), SPA 2 had 14.4% of Chlamydia, 12.9% of Gonorrhea, 17.4% of primary and secondary syphilis, 13.5% of early latent syphilis, 35.7% of congenital syphilis cases⁴⁰.

Aging Issues

Community members identified aging issues as one of the top 10 priorities. As the baby boomers are growing older, it is important to establish a system to deal with aging issues. Health care professionals that provide services to the elderly discussed the multitude of issues they face with their clients. They mentioned that there are not enough physicians in SPA 2 who specialized in providing geriatric services. Health care professionals also mentioned how difficult it is for their elderly patients to accept the help they need to conduct activities of daily living. Some of the focus groups discussed the physical, mental and environmental factors that create barriers for the elderly to accessing health care on a regular basis.

The senior peer counselors, elderly care providers and health care providers shared the following concerns and issues about the elderly.

A large number of elderly prefer to live independently, and continue to perform the activities they used to perform before they were incapacitated. It is difficult for them to accept their physical limitations with driving a car or living independently. The loss of independence causes anxiety and depression, which in turn results in isolation, anger, frustration, helplessness and an abusive attitude. Many of the elderly have trust issues with their care givers. This creates a barrier for accepting help from in home care givers. Elderly that suffer the loss of a loved one, loss of independence, or loss of independent living could become severely depressed.

Senior mental health counselors shared that when elderly clients feel isolated, depressed and frustrated they either forget to take their medication, or become non-compliant with medications and follow up doctor appointments. Some of the community members shared that poverty among elderly causes non-compliance with prescribed treatment. Some elderly do not take the full dose of medication or do not refill the prescriptions due to the cost of refills which worsen the condition of their health. In SPA 2, 15.4% of adults reported not obtaining needed prescription medication in the past year because they could not afford it¹⁹.

Some of the providers stated that the primary care providers often do not take the time to check all the prescriptions of an elderly patient to make certain that there are no adverse drug reactions. Providers discussed the lack of coordinated care for the elderly, and lack of geriatric specialists in their communities.

Teen Pregnancy

Teen pregnancy was identified as an issue in SPA 2. Community members felt that teen pregnancies have increased in their communities, and that this issue needs to be addressed by the local health care agencies and health care providers. The reasons for increased teen pregnancy were attributed to lack of parental supervision, peer pressure, lack of good role models, lack of after school youth activities, lack of sexual counseling/education, lack of contraceptives that are available for teens, and parents not knowing how to talk to their children about sex.

Other contributing factors include poverty, and lack of social support for teens. The rate of births (per 1,000 live births) to mothers under 20 years of age in SPA 2 is 5.6%.* (California Department of Public Health, 2011 Birth Records)⁵².

In the SFV, the communities with the highest number of births to women under the age of 20 years include Pacoima (186), Van Nuys (164), North Hollywood (140), Panorama City (116) and North Hills (103). In the SCV, the highest number of births among teen mothers is in Canyon Country (60) and Newhall (33)⁵².

*Maternal, Child & Adolescent Health Program: 2010 birth and 2010 death record data (for infant mortality) and 2011 birth data obtained from the California Department of Public Health, Center for Health Statistics, OHIR Vital Statistics Section.

Housing/Homelessness

Affordable housing is an issue that was discussed by community members. Housing affordability depends on employment status, and due to reduced hours of employment or unemployment, many community residents felt that homelessness has increased. Homelessness ranked as one of the top 10 issues that need immediate intervention.

According to the 2011 Los Angeles County Health Survey by the Office of Health Assessment and Epidemiology, in LA County 324,000 people were estimated to be homeless or have not had their own place to live or sleep in the past 5 years. West Valley in SPA 2 has the highest percentage (10.4%) of adults who reported being homeless or have not had their own place to live or sleep in the past 5 years (2011 Los Angeles County Health Survey; Office of Health Assessment and Epidemiology, Los Angeles County Department of Public Health)¹⁹.

On January 31, 2013, at the end of the SPA 2 homeless count, 8,110 persons were determined to be homeless by the 2013 Greater Los Angeles Homeless Count conducted by the Los Angeles Homeless Services Authority (LAHSA). Out of the total homeless population, 20.0% (1,583) were sheltered and 80.0% (6,526) were unsheltered. Out of the 6,526 that were unsheltered, 3,573 were found on the

streets and in their vehicles. The remaining 2,953 were found on private property in backyards, or unconverted garages via Hidden Homeless Telephone Survey.*

Chronic Homelessness is defined as an unaccompanied disabled person who has been continuously homeless for over one year or has had at least four episodes of homelessness in three years, or a family is considered chronically homeless if at least one member meets the definition of chronic homelessness. In SPA 2, an estimated 2,368 people are chronically homeless. Out of 2,368, 90.0% are single adults, 8.0% are households with children. The prevalence of chronic homeless in SPA 2 (29.0%) is far above the national average of 16.0%. Out of the total number of (923) are homeless veterans (11.0% of SPA 2 total), and 6.0% are female veterans. Out of the total homeless veterans, 38.0% or 351 veterans are chronically homeless (Los Angeles Homeless Services Authority, 2013)²⁵.

*This telephone survey is a fairly unique approach for uncovering unsheltered homeless persons. If this count component is removed it is removed from the next count, the 2013 point-in-time total (including Glendale) would likely be revised to 5,157; 3,573 unsheltered and 1,583 sheltered.

Demographic Profile

Population Description

With population over two million, SPA 2 consists of two distinct social, cultural, and economic areas: the SFV and the SCV. Over 1.8 million people live in the SFV (SFV), while the SCV (SCV) has over 280,000 people. An examination of the population size, and growth as well as features of age, race/ethnicity, household income, educational attainment, and insurance status provides an initial framework to describe the area's communities, identify needs and issues, and develop planning priorities.

Population Size

SFV communities with the largest population

(Total population 1,852,454)

Community	Population	% Total SFV Population
Glendale	172,577	9.3%
Van Nuys	167,511	9.0%

Population Growth

The population of the SFV is projected to increase from 1,852,454 people in year 2012 to 1,880,374 people by year 2017, reflecting an increase of 1.51%. The greatest population growth in the SFV over the next five years is projected to be among those ages 65 to 85+ years old from 22.7% in 2012 to 25.1% in 2017. There is a projected 1.4% decrease in population ages 35 – 54 years old from 2012 to 2017.

Within the SCV, the population is projected to increase from 280,409 in year 2012 to 303,080 people by year 2017, reflecting an increase of 8.1%. There is a projected 5.5% decrease in population ages 35-54 from 2012 to 2017. There is 3.7% increase projected for adults 55 to 64 years old from 2012 to 2017⁵.

**Total Population Count
at the Census Tract Level**

**Total Population Density
at the Census Tract Level**

Prepared by R. Maas, California State University Northridge 10/2013. Data source: U.S. Census Bureau

Population Gender

The population of SPA 2 is evenly distributed between males (49.5%) and females (50.5%). The SFV has a slightly higher percent of females (50.5%) compared to SCV (50.1%). Similarly, SCV has more males (49.9%) compared to SFV (49.5%)⁵.

Population by Age

Children < 5 years old

The total SPA 2 population of children between 0-4 years of age is 148,388. Children < 5 years old comprise 13.8% of the total SFV population. In SCV, 14.9% of the total population is comprised of children <5 years old.

Communities within the SFV that have the highest number of children <5 years old include Panorama City, Pacoima, San Fernando, Sun Valley and North Hills. Communities in SCV that have the highest number of children <5 years include Valencia, Canyon Country and Santa Clarita.

SFV communities with a high number of children < 5 years old

Community	Population Age < 5 years old	% of Total Individual Community Population
Pacoima	9,406	9.1%
Van Nuys	13,842	8.3%
North Hollywood	11,864	7.6%
Glendale	9,188	5.3%

Ages 5 – 14 years old

In SPA 2, children between the ages of 5 to 14 years represent 13.0% of the total population. The communities with the highest percent of young children in SFV include Glendale (11.0%), North Hollywood (13.8%), Pacoima (16.0%), Sylmar (15.3%) and Van Nuys (14.6%). In the SCV, Canyon Country (15.2%), Santa Clarita (15.4%) and Valencia (13.6%) have the highest percent of children between 5 to 14 years of age⁵.

SFV communities with the highest number of children 5-14 years old

Community	Total Population Ages 5-14	% of Total Individual Community Population
Pacoima	16,565	16.0%
Sylmar	14,232	15.3%
Van Nuys	24,440	14.6%

Source: 2011 Los Angeles County Health Survey; Office of Health Assessment and Epidemiology, Los Angeles County Department of Public Health

Note: The information presented is based on self-reported data from a randomly-selected, representative sample of 6,013 Los Angeles County parents/guardians. The 95% confidence intervals (CI) represent the margin of error that occurs with statistical sampling, and means that the actual prevalence in the population, 95 out of 100 times sampled, would fall within the range provided.

Ages 20 – 34 years old

The young adults represent 21.8% of the population of the SFV and 20.7% of the population in the SCV. The SFV communities with the highest number of adults between the ages of 20-34 include Burbank (20.4%), Glendale (20.3%), North Hollywood (23.5%), Pacoima (25.2%), Sylmar (23.2%) and Van Nuys (22.3%). In the SCV, Canyon Country (22.6%), Santa Clarita (21.1%) and Valencia (18.2%) have the highest number of adults between the ages of 20-34 years old⁵.

SFV communities with a high number of adults 20-34 years old

Community	Total Population Ages 20-34	% of Total Individual Community Population
Burbank	21,872	20.4%

Ages 75+ years

Senior population (75+ years old) is one of the smallest demographic group represented in both the SFV and SCV. In the SFV, only 5.4% (101,010) represents the senior population 75+ years and in the SCV, 4.6% (12,965) are seniors. Population over the age of 75 years has special needs. Affordability and accessibility of services for seniors was one of the issues that were reported by the senior care providers. Community reported that senior care services that are affordable and accessible are important in reducing the long term disability and overall health care costs⁵.

The communities with the highest senior population in the SFV include Burbank (6.7%), Glendale (7.4%), Van Nuys (3.9%) and Woodland Hills (9.6%). In the SCV, Valencia (6.8%), Castaic (8.5%), Canyon Country (5.5%) are the communities that have the highest senior population (75+ years old)⁵.

Population by Ethnicity

Although the racial/ethnic composition of SPA 2 remains diverse (41.8% Caucasian, 3.3% African Americans, 11.0% Asians, 41.1% Hispanic), Caucasians and Hispanics represent largest racial/ethnic group in the SFV. However, in SCV, Caucasians make up more than half the total population at 51.8% followed by Hispanics (29.7%) and Asians (10.9%)⁵.

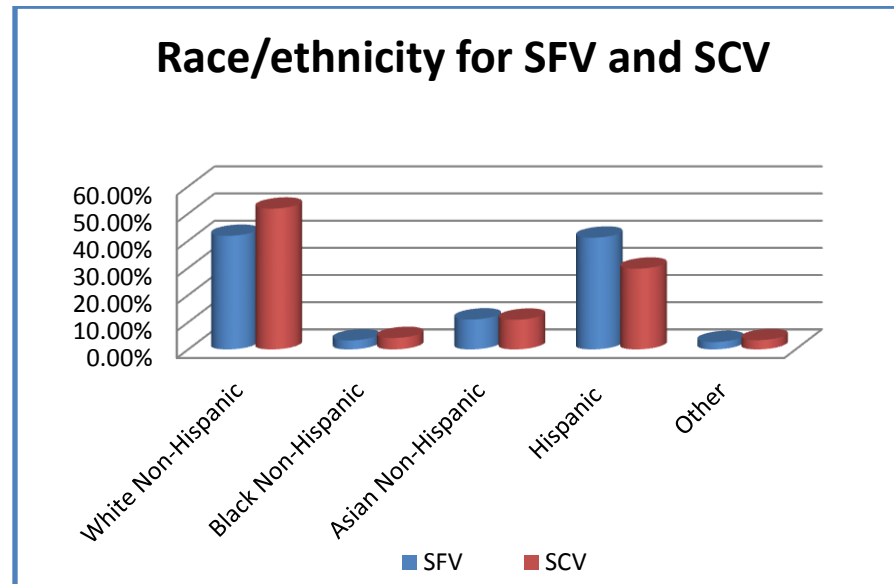

SFV ethnic composition

Race/ethnicity composition	% Total SFV Population
Caucasian	41.8%
African Americans	3.3%
Asian	11.0%
Hispanic	41.1%
Other	2.7%

SCV ethnic composition

Caucasian

Caucasians represent 41.8% (775,064) of the total population of the SFV and 51.8% of the SCV. The communities with the largest Caucasian population in the SFV include Topanga, Calabasas, Agoura Hills, Studio City and Sherman Oaks. In the SCV, the majority of Caucasians live in the communities of Santa Clarita, Valencia and Stevenson Ranch⁵.

SFV Communities with largest Caucasian population

Community	Caucasian Population	% of Total Individual Community Population
Topanga	5,297	84.5%
Calabasas	21,161	80.2%
Agoura Hills	20,261	78.6%

Hispanic

In the SFV, Hispanics represent 41.1% (761,594) of the total population. In SFV, even though highest number of Hispanic live in Pacoima (91,770), Van Nuys (89,917) and North Hollywood (80,045), the highest percent of Hispanic are in San Fernando, Pacoima, Sylmar, Sun Valley and Panorama City. In SCV, many of the Hispanic residents live in Newhall, Canyon Country and Castaic.

Hispanics represent 29.7% of the population of the SCV (280,409). The highest percentage (34.4%) of Hispanic population lives in Canyon Country⁵.

SFV communities with the highest Hispanic population

Community	Hispanic Population	% of Total Individual Community Population
San Fernando	32,124	92.3%
Pacoima	91,770	88.5%
Sylmar	70,882	76.1%
Sun Valley	34,902	74.2%
Panorama City	50,886	72.8%

SCV communities with the highest Hispanic population

Community	Hispanic Population	% of Total Individual Community Population

Region of Birth

According to the 2010 U.S. Census and 2007-2011 American Community Survey, SPA 2 has a high immigrant population. In SFV, 39.6% (733,644) of the total population is foreign born. Out of the 733,644 foreign born residents living in the SFV, about 13.8% (101,292) live in Glendale, 10.1% (74,114) live in Van Nuys and 9.1% (66,118) live in North Hollywood. Similarly, SCV has 11,567 (21.0%) of the foreign born live in Valencia, 17,036 (31.0%) in Canyon County, and 18.4% (10,139) in Newhall⁵.

Born in the U.S. and Foreign Born

According to the U.S. Census Bureau American Community Survey 2007-2011, 39.3% of the SFV population is foreign born. The communities with the highest percent of foreign born population are Glendale 56.9%, Panorama City 53.3%, Sun Valley 46.4%, Pacoima 45.4% and North Hills 44.8%. In the SCV, Newhall with 29.0%, Canyon Country with 23.8% and Stevenson Ranch with 23.1% are the communities that have the highest percent of foreign born population.

The communities with the highest number of individuals born in a foreign country include Glendale (101,292), Van Nuys (74,114), and North Hollywood (66,118) in SFV and Canyon Country (17,036) in the SCV (U.S. Census Bureau, American Community Survey, 2007-2011)⁵¹.

Language Spoken at Home

The language spoken at home is a representation of the ethnic diversity within the SPA 2. As discussed earlier, in the SFV 41.8% of the population is Caucasian and 41.1% is Hispanic. Therefore it is not surprising that English and Spanish are the languages that are most often spoken at home. This is also true for SCV, where 51.8% of the population is Caucasian and 29.7% is Hispanic; and the language spoken at home is mainly English (68.9%) followed by Spanish (19.4%)⁵¹.

In 2011, out of the total population of 1,749,256 (5 years or older), 1.9% in the SFV and 1.1% in the SCV spoke a language other than English at home⁵¹.

Speak English Less Than Very Well

SPA 2 consists of diverse ethnic groups with numerous spoken languages. In general, ethnic groups prefer speaking in their native tongue at home, and practice their cultural and religious customs in order to pass it down to the next generation. Language, culture and food sustain the most intimate relationship with their origin of birth. Generally, the first generation immigrants either do not speak English or do not speak English very well.

In the SFV, there are 10 cities where more than 30% of the population speaks English less than very well. Comparatively, in the SCV only one city has more than 20% of the population speaks English less than very well.

Communities in the SFV that have more than 40% of the population speaking English less than very well include Panorama City 47.3% and Pacoima 42.2%. In the SCV, in Newhall, 22.8% of the residents do not speak English very well⁵¹.

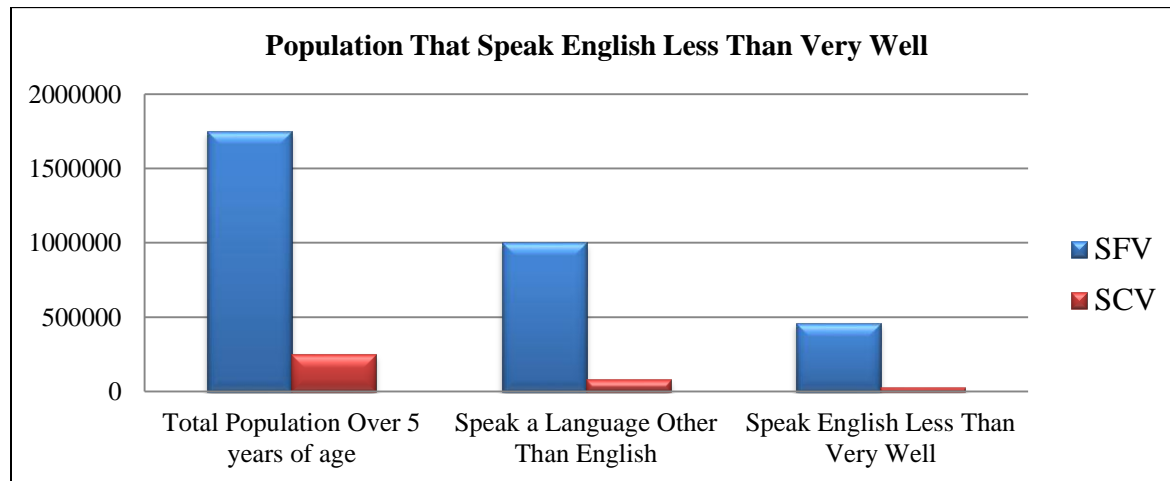

SFV communities with high percentage of English speaking only

Community	Population that Speak English Less than Very Well	% of Total Individual Community Population
Panorama City	30,292	47.3%
Pacoima	37,797	42.2%

SCV communities with high percentage of English speaking only

Community	Population that Speak English Less than Very Well	% of Total Individual Community Population
Newhall	7,423	22.8%

Source: U.S. Census Bureau, American Community Survey 2007-2011

Grandparents Caring for Grandchildren

Grandparents who are responsible for raising their grandchildren face a new set of issues and barriers. According to the resource “*Safe Children and Healthy Families are a Shared Responsibility, 2006*” information provided by the Children’s Bureau, Administration for Children and Families, U.S. Department of Health and Human Services, reports that 2000 U.S. Census found that over 2.4 million grandparents have taken the responsibility of raising their grandchildren. The article also states that many of the grandparents gave up their retirement and plans to raise the grandchildren whose own parents are not able to or willing to raise them.

Most often, grandparents take on the responsibility of raising their grandchildren when the grandchild’s own parents’ abandon them; children cannot live with their parents due to the parents’ mental disorder, substance abuse, or incarceration. This puts an additional burden on the grandparents as they need to make number of sacrifices to raise their grandchildren (Children’s Bureau, Administration for Children and Families, U.S. Department of Health and Human Services, 2006)⁵³.

In the SFV, 24.6% of the grandparents who are living with their own grandchildren younger than 18 years are responsible for raising their grandchildren. Studio City has the highest percent of grandparents (48.9%) responsible for their grandchildren. However, the highest number of grandparents that are responsible for their grandchildren are in Glendale (1,796). In the SFV, the communities with the highest percentages of grandparents responsible for their grandchildren include Studio City (48.9%), Granada Hills (35.3%), Northridge (34.5%), and Sun Valley (33.1%). In the SCV, Newhall (38.9%), Castaic (34.5%) and Santa Clarita (29.2%) are the communities where the highest percentage of grandparents responsible for their grandchildren⁵¹.

In the SFV, the communities with the highest number of grandparents living with their own grandchildren (younger than 18 years of age) include Glendale (5,776), Pacoima (6,726), Van Nuys (4,021), and Sylmar (3,895). In the SCV, Canyon Country (1,883) and Santa Clarita (1,092) are the two communities where high number of grandparents living with their grandchildren (younger than 18 years of age)⁵¹.

In the SFV, the communities where a high percentage of grandparents responsible for their grandchildren include Studio City (49.0%), Granada Hills (35.3%), Northridge (34.5%), Sun Valley (33.1%), and San Fernando (32.6%) and Calabasas (32.4%)⁵¹.

In the SCV, the communities where a high percentage of grandparents responsible for their grandchildren include Newhall (39.0%), Castaic (34.5%), Santa Clarita (29.2%) and Canyon Country (27.1%)⁵¹.

Birth Profiles

In 2011, there were a total of 25,159 births in SPA 2; 2,986 in the SCV and 22,173 in the SFV. Although majority of the births were to women between the ages of 20 and 35+ years, about 5.6% of the total births were to women under the age of 20 years.

Approximately 5.8% of the total births in the SFV, and 4.5% of the total births in the SCV were to mothers under the age of 20 years. Teen pregnancy was identified as one of the top 10 priorities that require immediate intervention.

In the SFV, the majority of the births were among the Hispanic mothers (11,975). In contrast, the majority of births in the SCV were among Caucasian mothers (1,099)⁵².

SFV communities with greatest number of births in 2011

Community	Total Births	% of Total Births
Van Nuys	2,406	10.9%
North Hollywood	1,963	8.9%
Glendale	1,786	8.1%

Fertility Estimates for Women 15-50 Years of Age

The 2007-2011 American Community Survey from the U.S. Census Bureau, reports that in the past year, SPA 2 had a total of 27,621 (per 1,000) births to women between the ages of 15 to 50 years. Of the total births in SPA 2, approximately 3.1% were to women between the ages of 15 to 19 years; about 17.7% were among women years 20 to 34, and 7.2% were to women 35 to 50 years of age.

The communities with the highest number of births to in the SFV include Glendale (2,497), Van Nuys (2,675). In the SCV, the highest number of births was in the communities of Valencia (811) and Canyon Country (782)⁵¹.

Mothers with Early Prenatal Care

A large majority, 19,595 (88.4%) of the total (22,173) SFV mothers received prenatal care during the first trimester. This is comparable to the 2,986 (87.6%) of the total (2,986) SCV mothers who received prenatal care in the first trimester⁵².

The five communities in the SFV where highest number of mothers received prenatal care in the third trimester include Pacoima (43), Van Nuys (37), North Hollywood (32), Glendale (29) and Sylmar (28)⁵².

The two communities in the SCV where a high number of mothers received prenatal care in the third trimester include Canyon Country (23) and Newhall (10)⁵².

Mothers without Early Prenatal Care

The following communities in SPA 2 need improvement in early prenatal care for pregnant mothers in their first trimester:

SFV communities with highest percentage of births without first trimester prenatal care

Community	Births without 1 st Trimester Care	% of Total Community Births without 1 st Trimester Care
Sylmar	186	14.6%

Breastfeeding

Breast milk is the best source of nourishment and ensures a newborn’s health and immunity. In addition, breast milk reduces the infant’s risk for infectious and noninfectious diseases like diarrhea, ear infection and leukemia. Children who receive breast milk also have a lower risk for developing chronic conditions such as asthma, diabetes and childhood obesity. Breastfeeding not only benefit the infant’s long term health, but also lowers the mother’s risk for developing Type 2 diabetes, breast and ovarian cancer (Los Angeles County Department of Public Health, Office of Health Assessment and Epidemiology, Hospital Practices: Can They Impact Breastfeeding?, August 2013)⁵⁴.

Most women in the East Valley, Glendale, and San Fernando health districts initiate breastfeeding, their rates are much higher than the overall county rate of 87.4%. However, in the West Valley health district breastfeeding initiation rate is notably lower than the other health districts in SPA 2¹⁹.

Percent of Children (0-5 years old) who were Breastfed by their Biological Mothers at Birth (i.e., Initiation of Breastfeeding).				
Los Angeles County Health Survey, 2011.				
Child Breastfed at Birth (i.e., Initiation)	Percent	95% CI		
LA County	87.4%	84.0	-	90.8
Health District				
East Valley	91.7%	83.6	-	99.7
Glendale	95.4%	88.7	-	100.0
San Fernando	95.2%	89.6	-	100.0
West Valley	77.7%	56.4	-	99.0

Source: 2011 Los Angeles County Health Survey; Office of Health Assessment and Epidemiology, Los Angeles County Department of Public Health.

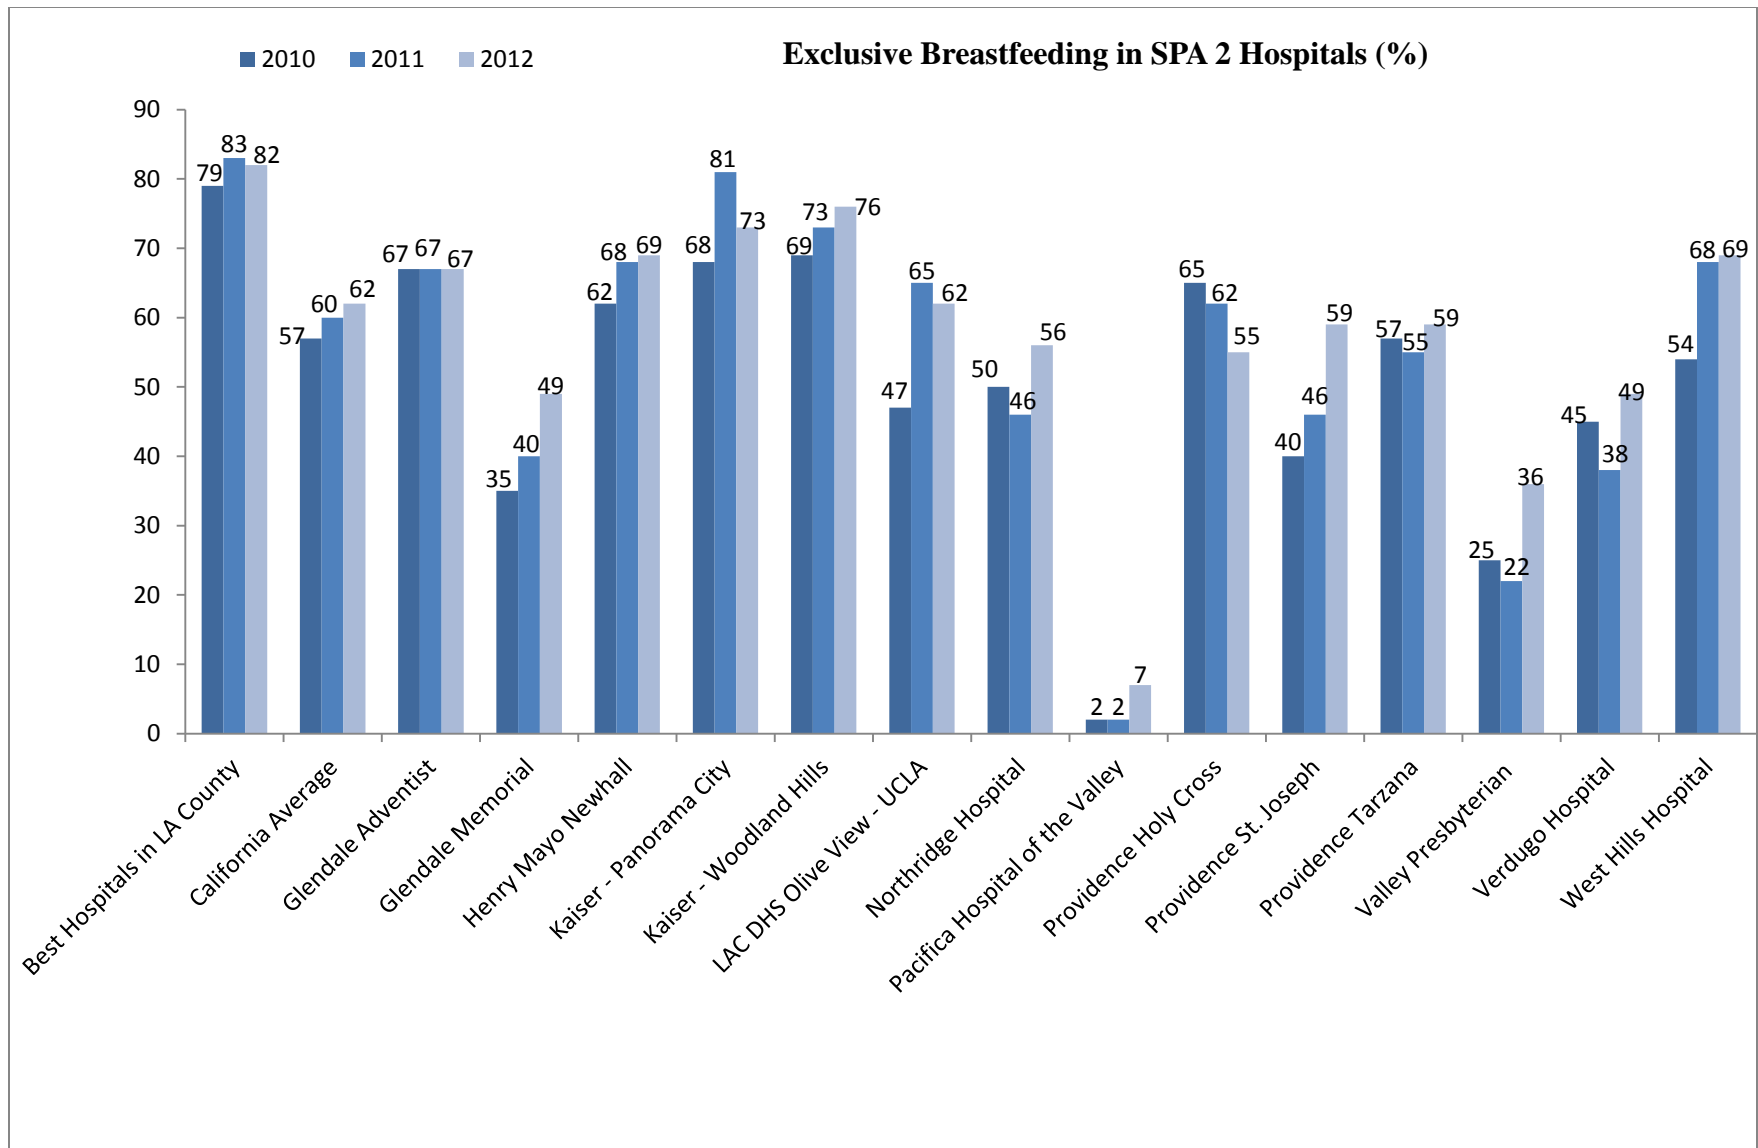

Note: The information presented is based on self-reported data from a randomly-selected, representative sample of 6,013 Los Angeles County parents/guardians. The 95% confidence intervals (CI) represent the margin of error that occurs with statistical sampling, and means that the actual prevalence in the population, 95 out of 100 times sampled, would fall within the range provided.

The World Health Organization (WHO) recommends that infants should be exclusively breastfed (given only breast milk) for the first six months of life to achieve optimal health. The following graph shows an improvement in the breastfeeding practices in LA County from 2010 to 2012. However, LA county rates rank lower when compared to the California average.

Socioeconomic Profile

Population by Levels of Education

Education presents an individual with his or her greatest opportunity to further their level of income. More than 19.2% of residents who live in Pacoima have not graduated with a high school diploma. In contrast, in Northridge only 5.6% of the population has not graduated with a high school diploma. In addition, while 53.0% of households in Pacoima are earning less than \$50K a year, only 41.8% of households in Northridge are earning less than \$50K a year. As discussed earlier in the CHNA, nearly half (49.9%) of adults living in the East Valley do not have health insurance. By contrast, slightly more than quarter (27.0%) of adults living in the West Valley are uninsured.

Patterns are more equitable throughout the SCV. Levels of education might be the greatest disparity. For example, while 8.4% of residents who live in Canyon Country have not graduated with a high school diploma, only 3.4% of adults living in Valencia do not have a high school diploma. As in the SFV cases, while 26.6% of households in Canyon Country are earning less than \$50K a year, just 24.1% of households in Valencia are earning less than \$50K a year. The contrast to the SFV is not as steep. Overall only 7.1% of individuals within the SCV have not obtained a high school diploma, while 8.3% of individuals within the SFV have not obtained a high school diploma⁵.

SFV communities with the highest number of individuals without a high school diploma

Community	9 th to 12 th Grade, No Diploma	% of Total Individual Community Population

Employment Status

There are several social determinants toward employment status. SPA 2 adults that are unemployed looking for work is 13.3% compared to the national average of 8.4%, 13.3% of adults are unemployed and looking for work. Education and access to health care services play primary factors. While national averages of 14.3% indicate that adults have less than a high school education, 19.1% of adults 18+ years old in SPA 2 are without the same. Furthermore, while national averages indicate 21.3% of adults do not have health insurance, 27.0% of adults 18 to 64 years living in SPA 2 are without coverage. Access to health care services is an important factor towards creating a healthy workforce¹⁹.

Population under 100% Federal Poverty Level (FPL)

Against national averages of 15.9%, 15.0% of SPA 2 households live below 100% FPL. While that is a positive for SPA 2 to have a rate lower than the national average, life is very difficult for those who live under 100% FPL. Affordable housing and homelessness are significant factors as 9.6% reported being homeless or not having their own place to sleep in the past five years. In addition, 30.0% of residents experience food insecurity, and 12.6% of residents have received food stamps. Poverty impacts access to health services, affordable housing, mental health, education, and employment¹⁹.

Population under 200% Federal Poverty Level (FPL)

In general, the population living in poverty does not have equitable access to health care, due to the high cost of care. Low wage earners are less likely to be covered by employer based health insurance, and are often less able to afford out-of-pocket expense for medical services. In the SFV, 9.7% of the total population earns less than \$24,999, and in the SCV, only 4.8% of the total population earns less than \$24,999. Living within 200% of the FPL can have detrimental effects toward health status⁵.

Children in Poverty

Access to health care services, education, and child care affect child poverty. Throughout SPA 2, 4.2% of children of ages 0-17 years are without health care insurance, 9.6% of children ages 3-17 years were unable to afford dental care and checkups in the past year, and 3.5% of children ages 0-17 years were unable to afford to see a doctor for an illness or other health problems in the past year. Throughout SPA 2, 26.5% parents with children of ages 0-5 years have reported difficulty finding child care¹⁹. Head Start Programs play an important factor for such families, and are utilized by 20.0% of children in SPA 2. Both access to health care services, and early childhood education further academic performance and help to bolster lifetime income.

Source: Dignity Health Community Needs Index, 2011

Community Need Index⁵⁵

In an attempt to identify the areas with most need, Dignity Health previously known as CHW partnered with Solucient, LLC, to apply a scientific model to fulfill community benefits needs. Dignity Health's research has shown that CNI data applies to hospital readmissions. Residents of communities with the highest CNI scores (4.2 to 5.0) are twice as likely to be hospitalized for manageable conditions, like pneumonia and asthma, as the communities with lower CNI scores. Hospital readmissions for preventable conditions contribute to an increase in health care costs, for families, hospitals, and the health care sector as a whole. Out of 65 zip codes in SPA 2, 24 zip codes were identified as the highest need areas with a score of 4.2 or higher, representing approximately 37.0% of all zip codes.

The CNI tool assesses underlying social and economic barriers that affect health. Those barriers include income, culture/language, education, insurance, and housing. Scores are assigned to each barrier, which are then added to create a total score per zip code. A score of 1.0 indicates a zip code with low need, while a score of 5.0 indicates the highest need.

Poverty

Income barriers describe the percent of elderly, children, and single parents that are living in poverty. In general, the population living in poverty does not have equitable access to health care, due to the high cost of care. Low wage earners are less likely to be covered by employer based health insurance, and are often less able to afford out-of-pocket expense for medical services.

Culture/Language

Culture/Language defines the percent of the minority populations in the community, and correlates to English proficiency among community residents. An individual's limited or inability to communicate in English creates a barrier in patient and care giver communication; and for understanding the health need protocols. The minority population with limited English speaking skills may face difficulty communicating effectively with the health care professionals, understanding health care materials, and treatment options.

Education

Education plays a role in gaining employment and wage levels. Low levels of education yield low paying jobs, and temporary or seasonal employment compared to more permanent positions. Temporary or seasonal work does not provide employer covered health insurance; thus, causing barriers to health care access.

Unemployed

Employment status is correlated to education levels.

Insurance

Health insurance is an important factor to accessing health care services. Temporary employment does not provide health insurance, and causes barriers in receiving health care.

Housing

SFV is predominantly a residential area with more rental properties than individual homes. There is higher percentage of apartment renters compared to home owners.

Population by Household Income

Household income differences exist in SPA 2, and are seen more in certain communities than others. In 2012, the total household count for SFV was 632,435. Out of the 2012 total household count, 11.0% of the population reported earning less than \$15,000 annually. In the SCV, there were a total of 89,168 households. Of which 5.3% reported earning less than \$15,000 annually. In addition, 10.0% of the SFV and 5.5% of the SCV earn less than \$35,000 annually⁵.

In the SFV, 18.3% of the households and in the SCV, 17.5% of the households earn between \$50,000 and \$74,999 a year⁵.

SFV communities with the highest number of household earning between 50K-74,999 annually

San Fernando Valley Household Income, 2009-2012

Santa Clarita Valley Household Income, 2009-2012

SPA 2 has a total of 721,603 households. Of which 10.3% of the total population made less than \$15,000 in their annual earnings. Only 18.5% reported earning \$15,000 to \$35,000 and 18.2% said they made \$50,000 to \$75,000 annually. However, 27.0% reported making more than \$100,000 annually⁵.

Homelessness

Overview: Depending on how you look at it, homelessness can be seen as pervasive or rare in the San Fernando and SCV (SPA 2). A Homeless Count was completed on January 31, 2013 in SPA 2. On that night, 8,110 persons were estimated to be homeless, or 0.38% of the population (1 out of every 265 persons). In terms of scale, SPA 2's homeless population size falls between the states of Louisiana (7,772) and Virginia (8,424).²⁷ In Los Angeles County, SPA 2 had more estimated homeless persons than some of the other SPAs [see map on right].

Of the total homeless persons found that night, 1,583 (20%) were sheltered and 6,526 (80%) were unsheltered. Of the 6,526 unsheltered, 3,573 were found on the streets and in vehicles. The remaining 2,953 persons were found to on private property in backyards and unconverted garages via the Hidden Homeless Telephone Survey²⁸. The unsheltered rate is particularly acute in SPA 2, highlighting the need for more homeless-specific resources and greater systemic coordination.

Annualized Data vs. Point-In-Time (PIT) Data: Annualized data is useful for looking at the scope of the homeless situation over a year long period – in this case calendar year 2013 compare to one night in January 2013. It is estimated that 21,728 people will experience homelessness at some point during 2013 in SPA 2 (including Glendale). To calculate annualized estimates for any homeless subpopulation multiply that total by 2.913. For example, there were an estimated 923 homeless veterans on January 31, 2013, making the 2013 annualized homeless veterans estimate 2,688.

Chronically Homelessness: Overall, SPA 2 Chronically Homelessness Persons PIT estimate was 2,368. Ninety-two percent of them were single adults (2,174), while 8% were in households with children (194). The prevalence of chronic homelessness in SPA 2 was 29%, which was very similar to recent LA County and California averages, but far above the national average of 16%²⁷.

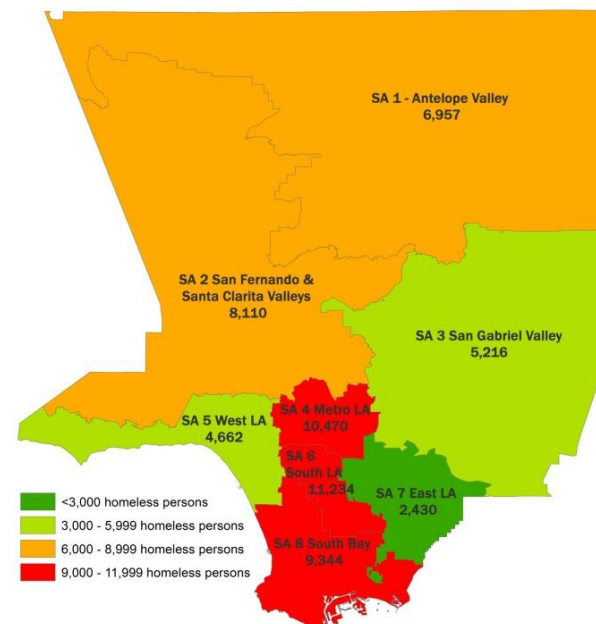

a- The state totals are for the year 2012, the most recent state numbers available from HUD. Accessible at: <https://www.onecpd.info/resource/3031/pit-and-hic-data-since-2007/>

b- The Hidden Homeless Telephone Survey is a fairly unique approach for uncovering unsheltered homeless persons. If this Count component is removed it is removed from the next Count, the 2013 point-in-time total (including Glendale) would likely be revised to 5,157: 3,573 unsheltered and 1,583 sheltered.

c- An unaccompanied disabled person who has been continuously homeless for over one year or has had at least four episodes of homelessness in three years; or a family is considered chronically homeless if at least one member meets the definition of chronic homelessness.

Sources: 2013 Greater Los Angeles Homeless Count, *Los Angeles Homeless Services Authority*²⁷

2013 City of Glendale Homeless Count Report, *City of Glendale/Community Services and Parks Department*²⁸

Veteran Homelessness: The PIT estimate for veterans was 923 (11% of SPA 2’s total). The chronic homelessness estimate for this subpopulation was 38% -- a higher incidence level than their homeless civilian counterparts. Another key difference, only 6% of the SPA’s homeless veterans were female (52), compared to 26% female of the total SPA 2 population. Trend-wise, SPA 2’s homeless veteran prevalence rate stay only declined by 1 percentage point since the 2011 Count (12% to 11%). That compares to a county-wide decline from of 6 percentage points since 2011 (18% to 12%).

Population Charts

SPA 2 Homeless Populations, January 31, 2013

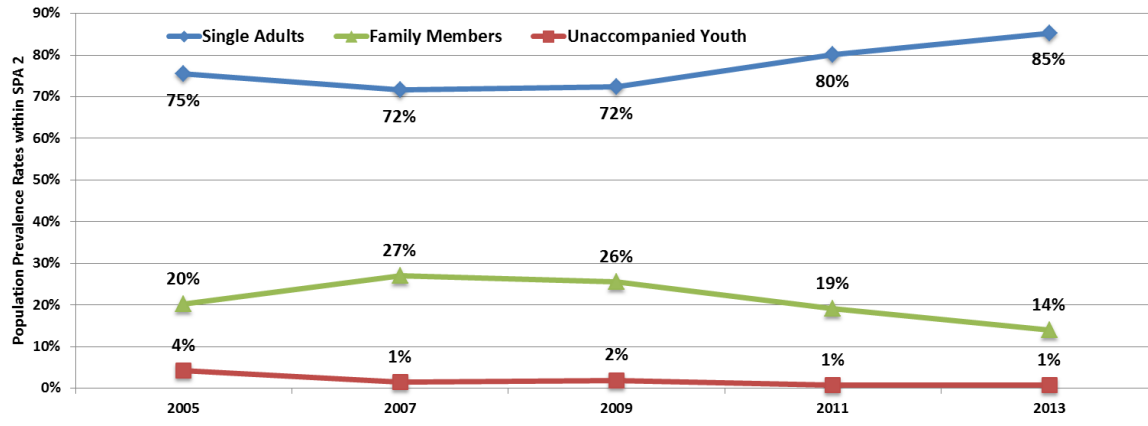

Note: The 1,130 family members are a part of 368 family households.

SPA 2 Homeless Population, Age Comparison, January 31, 2013

Note: Due to a lack of available additional information on 213 homeless persons in Glendale ages 25-61, these persons were placed in the 25-54 category.

*Excludes the Hidden Homeless Population, which cannot be accurately estimated at the small to medium size community/city level.
 **The City of Hidden Hills is located within one census tract. The majority of that census tract is in the City of Calabasas. As census tracts were the smallest unit of measure for the Count, these city estimates cannot be separated.

Key Disease Prevalence

Cardiovascular Diseases

Cardiovascular disease is a leading cause of death in the United States, and includes various heart diseases and stroke. Coronary artery disease is one of the most common heart diseases and occurs when plaque builds up inside the coronary artery. The coronary artery supplies oxygen-rich blood to the heart muscle. When plaque hardens or breaks, the coronary artery pathways become narrow, thus reducing the flow of oxygen rich blood to the heart. When plaque breaks away from the coronary artery it can cause a clot that partially or completely blocks blood flow through the coronary artery (NIH, Explore Coronary Artery Disease, 2012)²⁹. In SPA 2 the coronary heart disease death rate is 129.9 per 100,000 population (age adjusted)¹⁹.

The risk factors for cardiovascular disease include high blood pressure, unhealthy blood cholesterol levels, smoking, insulin resistance, diabetes, overweight or obesity and lack of physical activity²⁹.

Angina

Angina is an underlying symptom of coronary heart disease. Angina is chest pain or discomfort that occurs if an area of the heart muscle does not get enough oxygen-rich blood²⁹.

The total estimated cases of angina in the SFV represent 1.6% (28,998) of the total population. In the SCV, the estimated cases of angina represent 1.5% (4,154) of the total population⁵.

SFV communities with the highest number of angina cases

Prevalent Areas	2012 Estimated Number of Cases	2012 % of Estimated Cases
Glendale	3,191	11.0%

-----	-	-

Source: © 2012 The Nielsen Company, © 2012 Thomson Reuters. All Rights Reserved. Data presented for adults 18+ years old

Congestive Heart Failure

Congestive heart failure (CHF) does not mean that the heart stops working, but that is not able to pump enough blood to meet the body's needs. CHF occurs when the heart muscle is weak or there is a defect in the heart that prevents the blood from getting circulated. When the heart does not circulate blood normally, kidney will filter less fluid out of the circulation into the urine causing fluid retention; resulting in fluid buildup in the lungs, the liver, around the eyes and sometimes in the legs. The fluid

retention is called fluid “congestion” and thus the condition is referred to as congestive heart failure (American Heart Association: Congestive Heart Failure, January, 2011)³¹.

In SPA 2, estimated cases of CHF are high in Glendale (11.3%) and in Van Nuys (7.3%) in SFV and Valencia (28.5%) and Canyon Country (22.6%) in the SCV.

The total estimated cases of congestive heart failure in the SFV represent 1.2% (22,379) of the total population. In the SCV, the estimated cases of congestive heart failure represent 1.1% (3,172) of the total population⁵.

SFV communities with the highest number of CHF cases

Prevalent Areas	2012 Estimated Number of Cases	2012 % of Estimated Cases
Glendale	2,531	11.3%

Coronary Heart Disease

Coronary heart disease (CHD) occurs when plaque builds inside the coronary artery, which supplies oxygen-rich blood to the heart muscle. When plaque hardens or breaks, the coronary artery pathways become narrower reducing the flow of oxygen rich blood to the heart. When plaque breaks away from the coronary artery it can cause a clot blocking blood flow through the coronary artery. Over time, CHD can weaken the heart muscle and lead to heart failure and arrhythmias (rhythm of the heart). CHD is the most common type of heart disease and is the number one cause of death for both men and women in the United States (National Heart, Lung, and Blood Institute, National Institute for Health: What is Coronary Heart Disease, August, 2012)³⁰.

The total estimated cases of coronary heart disease in the SFV represent 3.0% (55,674) of the total population. In the SCV, the estimated cases of coronary heart disease represent 2.8% (7,890) of the total population⁵.

SFV communities with the highest number of CHD cases

Heart Attack

A heart attack is also called a myocardial infarction, and occurs when a section of the heart muscle dies or gets damaged because of reduced blood supply. Coronary artery disease (CAD) is the main cause of heart attack. A less common cause is a severe spasm of a coronary artery, which also can prevent blood supply from reaching the heart (National Center for Chronic Disease Prevention and Health Promotion, Division for Heart Disease and Stroke Prevention, 2012)³².

The total estimated cases of heart attack in the SFV represent 2.3% (43,150) of the total population. In the SCV, the estimated cases of heart attack represent 2.2% (6,143) of the total population⁵.

SFV communities with the highest number of heart attack cases

Source: 2011 Los Angeles County Health Survey; Office of Health Assessment and Epidemiology, Los Angeles County Department of Public Health.

Note: Estimates are based on self-reported data by a random sample of 8,036 Los Angeles County adults, representative of the adult population in Los Angeles County. The 95% confidence intervals (CI) represent the variability in the estimate due to sampling; the actual prevalence in the population, 95 out of 100 times sampled, would fall within the range provided.

*The estimate is statistically unstable (relative standard error >23%) and therefore may not be appropriate to use for planning or policy purposes.

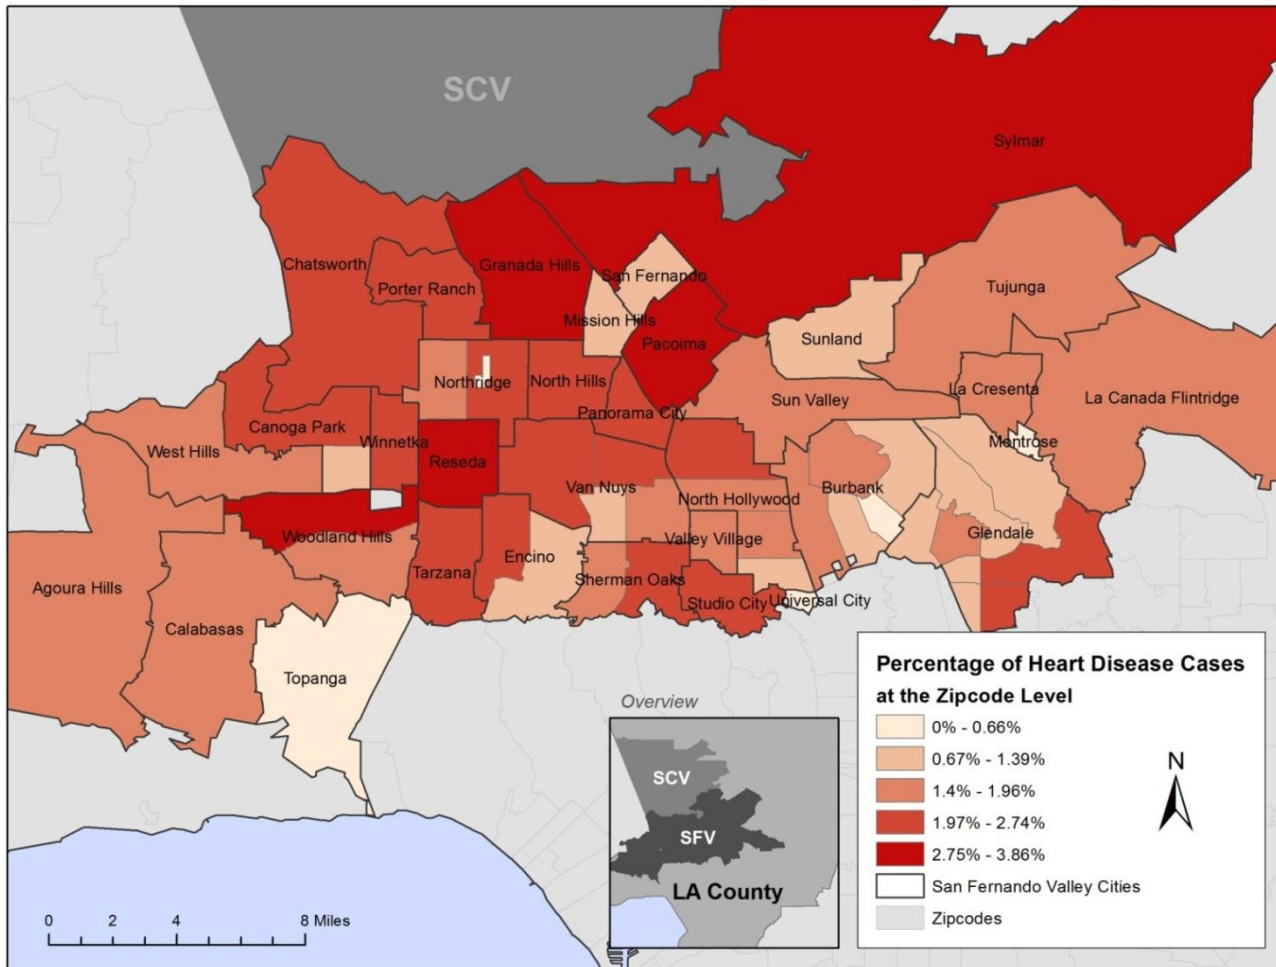

4. Weight status is based on Body Mass Index (BMI) calculated from self-reported weight and height. According to NHLBI clinical guidelines, a BMI < 18.5 is underweight, a BMI > 18.5 and < 25 is normal weight, a BMI > 25 and < 30 is overweight, and a BMI > 30 is obese. [REFERENCE: National Heart, Lung, and Blood Institute (NHLBI) http://www.nhlbi.nih.gov/guidelines/obesity/ob_exsum.pdf]

5a. To meet Physical Activity Guidelines overall: Must meet aerobic activity (at least one of the following at least one of the following criteria must be fulfilled: 1) Vigorous activity for at least 75 minutes a week, 2) Moderate activity for at least 150 minutes a week, or 3) A combination of vigorous and moderate activity for at least 150 minutes a week) AND muscle-strengthening activities on 2 or more days a week that work all major muscle groups (legs, hips, back, abdomen, chest, shoulders, and arms). [REFERENCE: Physical Activity Guidelines Advisory Committee. Physical Activity Guidelines Advisory Committee Report, 2008. Washington, DC: U.S. Department of Health and Human Services, 2008. <http://www.health.gov/paguidelines/pdf/paguide.pdf>]

¥ San Fernando Valley was defined by combining zip codes:

90290,91011,91020,91040,91042,91201,91202,91203,91204,91205,91206,91207,91208,91214,91301,91302,91303,91304,91306,91307,91311,91316,91324,91325,91326,91331,91335,91340,91342,91343,91344,91345,91346,91352,91356,91361,91364,91367,91401,91402,91403,91405,91406,91411,91423,91436,91501,91502,91504,91505,91506,91601,91602,91604,91605,91606,91607,91330,91371; Santa Clarita Valley was

Hypertension

Blood pressure is the force of blood against the artery walls as it circulates through the body. Blood pressure normally rises and falls throughout the day, but it can cause health problems if it stays high for a long period of time. Having high blood pressure increases the risk for heart disease and stroke - the leading causes of death in the United States.

High blood pressure is called the "silent killer" because many people do not realize that they have high blood pressure. High blood pressure often has no warning signs or symptoms¹¹.

The total estimated cases of hypertension in the SFV represent 20.8% (386,186) of the total population. In the SCV, the estimated cases of hypertension represent 20.2% (56,580) of the total population⁵.

Stroke

A stroke, sometimes called a brain attack, occurs when a clot blocks the blood supply to part of the brain or when a blood vessel in or around the brain bursts. In either case, parts of the brain become damaged or die. An ischemic stroke is when blood vessels that feed the brain are blocked due to a blood clot. When the supply of blood is blocked from a part of the brain, the brain cells will begin to die. The result of a stroke will be the inability to carry out daily living activities⁹.

Stroke is the fourth cause of death and leading cause of adult disability in the United States. A hemorrhagic stroke is when the blood vessels within the brain rupture. Some of the effects of stroke can be permanent, if numerous brain cells die due to lack of blood and oxygen flow into the brain. However, some brain cells do not die. Injured cells can repair themselves with time, allowing some body function to improve¹⁰.

The total estimated cases of stroke in the SFV represent 2.0% (35,475) of the total population. In the SCV, the estimated cases of stroke represent 1.8% (5,061) of the total population⁵.

Cancers

Breast Cancer

Breast cancer is a cancer that forms in the tissues of the breast, usually in milk ducts and glands that produce milk. Although, breast cancer can occur in both women and men, it is a very rare cancer among the male population (NCI, What You Need to Know about Breast Cancer, 2012)³³.

Some of the risk factors for breast cancer include obesity, alcohol consumption, and family history of breast cancer. The risk for breast cancer can be reduced by regular exercise, as well as early pregnancy and breastfeeding (NCI, What You Need to Know about Breast Cancer, 2012)³³.

According to the Key Indicators of Health by Service Planning Area report, the 19.2 per 100,000 females die from breast cancer in the SPA 2 area¹⁹.

The total estimated cases of breast cancer in the SFV represent 1.0% (17,638) of the total population. In the SCV, the estimated cases of breast cancer represent 0.9% (2,443) of the total population⁵.

SFV communities with the highest number of breast cancer cases

Cervical Cancer

According to the National Cancer Institute (NCI), cervical cancer occurs in the tissue of the cervix (the organ connecting uterus and vagina). This slow-growing, symptomless cancer can be detected by a Pap smear test. Human Papilloma Virus (HPV) is the cause of cervical cancer in most cases. It is estimated that 12,170 new cases of cervical cancer have been reported in 2012 in the U.S, resulting in 4,220 deaths¹⁴.

Most common risk factor for cervical cancer is HPV infection; unhealthy behaviors such as smoking can increase the risk for cervical cancer. Cervical cancer risk can be decreased by getting regular screening tests (Pap smear) or receiving HPV vaccination¹⁴.

The total estimated cases of cervical cancer in the SFV represent 0.4% (7,718) of the total population. In the SCV, the estimated cases of cervical cancer represent 0.4% (1,210) of the total population⁵.

SFV communities with highest number of cervical cancer cases

Colorectal Cancer

The National Cancer Institute (NCI) describes colon cancer as a cancer that develops in the tissue of the colon, the longest part of the large intestine. Most colon cancers start in cells that produce and release mucus and other fluids. Rectal cancer forms in the tissue of the rectum, the last part of the large intestine closest to the anus. A cancer that starts at either of these areas is known as colorectal cancer¹⁵.

The risk factors for Colorectal Cancer include family history, being 50 years or older, and polyps in colon or rectum. Even though most polyps are non-cancerous, some can and do become cancerous. Other risk factors that were identified were a personal history of cancer, an unhealthy diet, and smoking tobacco¹⁵.

The total estimated cases of colorectal cancer in the SFV represent 0.3% (6,225) of the total population. In the SCV, the estimated cases of colorectal cancer represent 0.3% (877) of the total population⁵.

SFV communities with the highest number of colorectal cancer cases

Lung Cancer

Lung cancer is the leading cause of cancer death, and the second most diagnosed cancer in both men and women in the United States. Lung cancer begins in the lungs and may spread to lymph nodes or other organs in the body, such as the brain. Cancer from other organs also may spread to the lungs. When cancer cells spread from one organ to another, the process is referred to as *metastases*.

Lung cancers are grouped into two main types called small cell and non-small cell cancers. Non-small cell lung cancer is more common than small cell lung cancer.

Cigarette smoking is the number one cause of lung cancer. Lung cancer also can be caused by using other types of tobacco (such as pipes or cigars), breathing secondhand smoke, being exposed to substances such as asbestos or radon at home or work, and having a family history of lung cancer¹⁶.

The total estimated cases of lung cancer in the SFV represent 0.1% (2,452) of the total population. In the SCV, the estimated cases of lung cancer represent 0.1% (346) of the total population⁵.

Prostate Cancer

Prostate cancer is the most common cancer among men in the United States. It is one of the leading causes of cancer deaths among men of all ethnicities. Prostate cancer forms in the tissues of the prostate - a gland in the male reproductive system found below the bladder and in front of the rectum. Prostate cancer generally occurs in older men of all ethnicities and is the second most common cause of death in men¹⁷.

The total estimated cases of prostate cancer in the SFV represent 0.6% (11,874) of the total population. In the SCV, the estimated cases of prostate cancer represent 0.6% (1,735) of the total population⁵.

Uterine Cancer

Uterine cancer forms in the tissue of the uterus (the small, hollow, pear-shaped organ in a woman's pelvis in which a fetus develops). The two types of uterine cancers are endometrial cancer (cancer that begins in cells lining of the uterus), and uterine sarcoma (a rare cancer that begins in muscle or other tissues in the uterus). Uterine cancer is the fourth most common cancer among women in the United States¹⁸.

The total estimated cases of uterine cancer in the SFV represent 0.3% (4,572) of the total population. In the SCV, the estimated cases of uterine cancer represent 0.2% (648) of the total population⁵.

SFV communities with the highest number of uterine cancer cases

Asthma

The National Heart, Lung, and Blood Institute defined asthma as a chronic lung disease that inflames and narrows the airways, thus causing the airways to get swollen and sensitive. When the airways get swollen, less air flows through the lungs making it harder to breath. Even though the causes of asthma are often unknown, some of the signs or symptoms are heavy coughing in the morning or evening, chest tightness and shortness of breath³⁴.

Risk factors for asthma include the development of allergies, family history of asthma, or if the individual has experienced respiratory infections, airborne allergens or exposure to irritants such as tobacco smoke during childhood. If Asthma is common in the family then some of these risk factors might make the airways more sensitive to pollutants in the air³⁴.

According to the California Department of Public Health, 9.1% of children from 0-17 years of age have been diagnosed as having asthma¹⁹.

Community members identified asthma as one of the top health issues that need immediate intervention. They reported concerns regarding the air quality, and high levels of air pollution that is contributing to the high number of asthmatic episodes in their children.

The total estimated cases of asthma in the SFV represent 8.7% (161,578) of the total population. In the SCV, the estimated cases of asthma represent 8.7% (24,283) of the total population⁵.

Diabetes

Diabetes is a condition resulting from high blood sugar levels due to defects in insulin production, insulin action or both. Diabetes can lead to serious complications and premature death. However, working with the support of health care providers, and taking steps to control the disease can lower the risk of complications. There are three types of diabetes: Type I, where the pancreas produces little or no insulin; Type II, which is most commonly a result of overweight and obesity, where the body becomes resistant to insulin; and gestational diabetes, where pregnant women who do not have diabetes in the past develop high blood sugar³.

Diabetes risk factors include obesity, age, heredity, race/ethnicity, poor dietary habits, and lack of physical activity or history of diabetes during pregnancy. According to the report published by the Los Angeles County Department of Public Health (LAC DPH) “Trends in Diabetes: A Reversible Public Health Crisis” diabetes rates have increased from 6.6% in 1997 to 9.1% in 2007³⁵.

In SPA 2, 19.8% of children in grades 5, 7, and 9 are obese (BMI above the 95th percentile)* and 21.1% of adults are obese (BMI ≥ 30.0)*¹⁹.

*Data obtained from the 2010 California Physical Fitness testing program, California Department of Education by LAC DPH

The total estimated cases of diabetes in the SFV represent 6.8% (125,673) of the total population. In the SCV, the estimated cases of diabetes represent 6.4% (18,071) of the total population⁵.

Source: 2011, 2007, 2005, 2002-03, 1999-00, 1997 Los Angeles County Health Surveys; Office of Health Assessment and Epidemiology, Los Angeles County Department of Public Health

Note: Estimates are based on self-reported data by a random sample of (8,036, 7,200, 8,648, 8167, 8354, 8004 corresponding to 2011, 2007, 2005, 2002-03, 1999-00, and 1997) Los Angeles County adults, representative of the adult population in Los Angeles County. The percentages and numbers are the best estimates of the actual prevalence of each described characteristic in the population. The 95% confidence intervals (CI) represent the variability in the estimate due to sampling; the actual prevalence in the population, 95 out of 100 times sampled, would fall within the range provided.

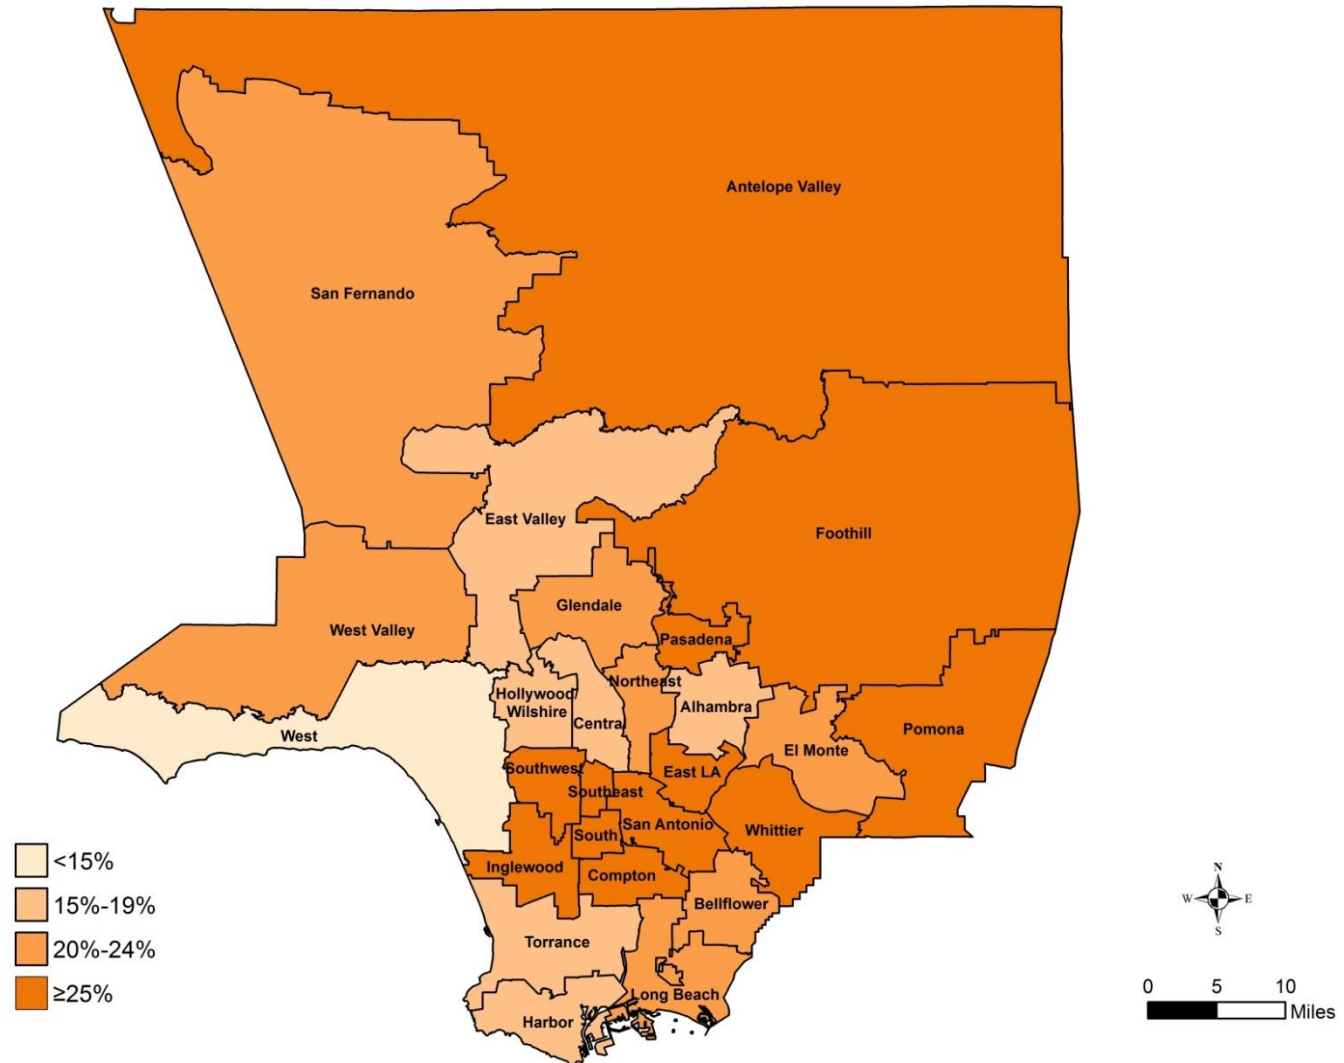

* The estimate is statistically unstable (relative standard error > 23%) and therefore may not be appropriate to use for planning or policy purposes.

^ Estimates may differ from prior estimates as new weights were utilized beginning March 20, 2006.

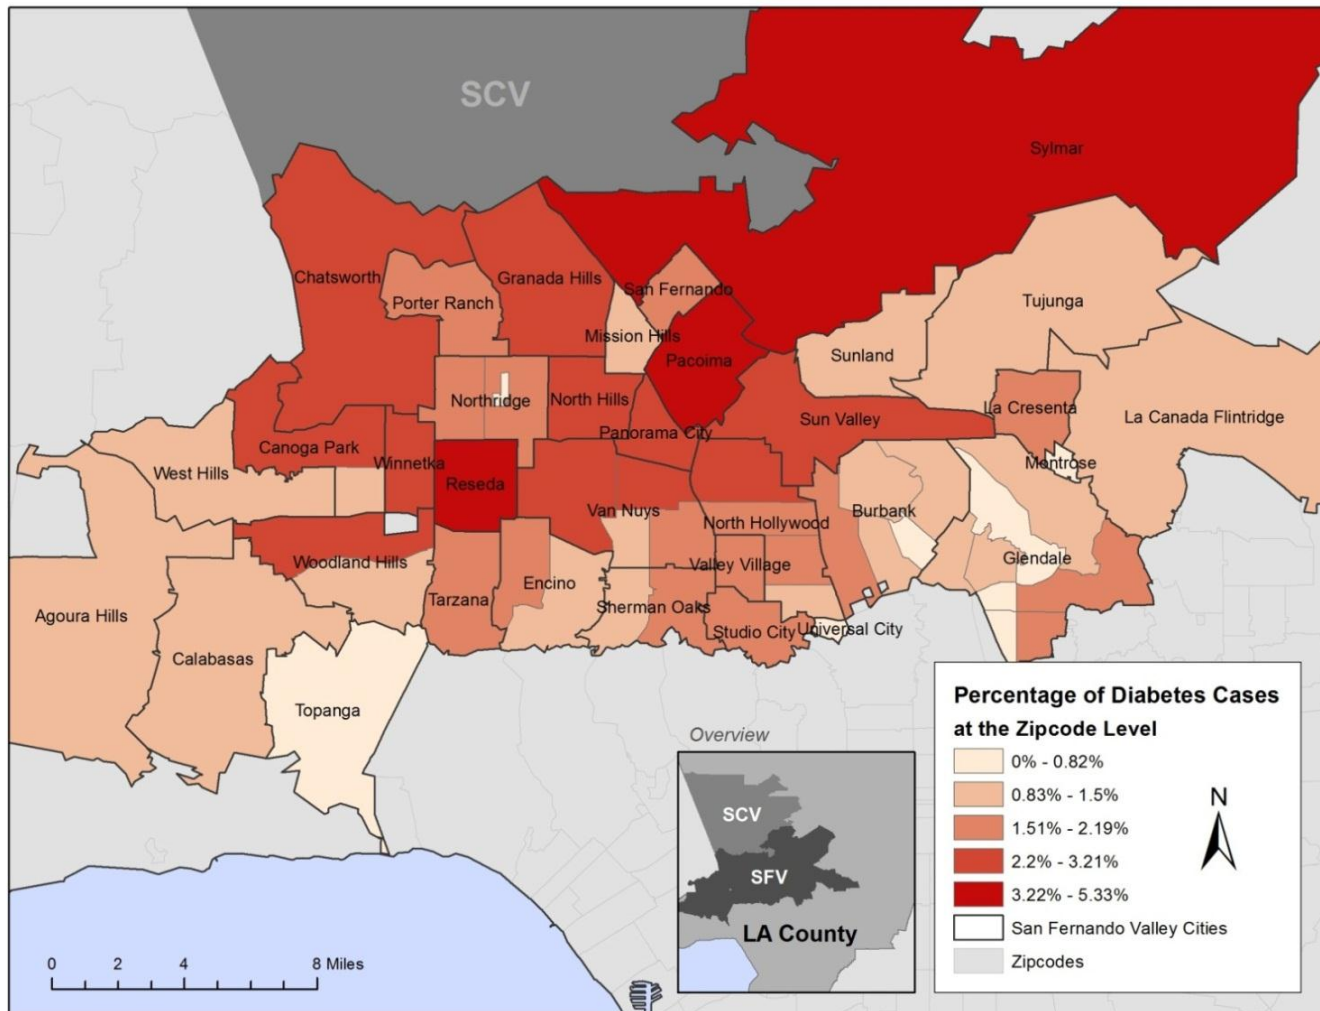

§ Two methodological changes were implemented in the 2011 LACHS to maintain the accuracy and representativeness of the data collected. These changes were adding cellular telephone households and adopting an improved weighting methodology. These changes should be considered when comparisons are made between 2011 data and data from prior survey years.

Mental Health and Depression

Depression is a serious illness. Individuals with depression may not seek treatment, but with proper treatment the majority of those affected can get better. Medications, psychotherapies, and other methods can effectively treat individuals with depression (NIMH, 2013)³⁶

The total estimated cases of depression in the SFV represent 8.7% (160,559) of the total population. In the SCV, the estimated cases of depression represent 8.4% (23,560) of the total population⁵.

SFV communities with the highest number of depression cases

Prevalent Areas	2012 Estimated No of Cases	2012 % of Estimated Cases
Glendale	15,465	9.6%
Van Nuys	14,256	8.9%
North Hollywood	13,590	8.5%
Burbank	9,785	6.1%
Pacoima	8,555	5.3%

SCV communities with the highest number of depression cases

Prevalent Areas	2012 Estimated No of Cases	2012 % of Estimated Cases
Canyon Country	6,182	26.2%
Valencia	5,747	24.4%
Santa Clarita	4,610	19.6%

Serious Emotional Disturbance (SED) and Serious Mental Illness (SMI)

According to the Los Angeles County Department of Mental Health (LAC DMH), Demographic Profile, 2010, out of the total population of SPA 2, 22,576 (50.5%) of females and 22,104 (49.5%) of males has Serious Emotional Disturbance or Serious Mental Illness. Furthermore, the age breakdown analysis shows that 13,114 (29.4 %) of children ages 0-5 years, 6,631(14.8%) young adults ages 18 to 25 years, about 18,374 (41.1%) of adults ages 25 to 59 years, and 6,562 (14.7%) of the adults over 60 years old were diagnosed as suffering from SED and SMI.

In the LAC DMH “Prevention and Early Intervention Roundtable in 2008” report while presenting data on the individuals experiencing onset of serious psychiatric illness states that “*Serious Mental Illness Penetration Rate: The overall Penetration Rate for Service Area 2 was 0.18 and was well below the countywide rate of 0.34. Such a figure suggested that the local mental health resources may have a smaller reach into the SMI population than other parts of the county. Across ethnicities, Asians (0.05) were the least-served by county mental health services. Following this, in order of Penetration Rates, were the White population (0.14), the Latino population (0.18), the Native American population (0.27) and the African-American population (0.62)*” (Los Angeles County Department of Mental Health; Vulnerable Communities in Los Angeles County: Key Indicators of Mental Health, Fall 2008)³⁷.

SPA 2 Population with SED and SMI by Ethnicity, Age and Gender

Ethnicity	Percent	Total
African American	4.4%	1, 971
Asian/Pacific Islander	6.6%	2,937
Latino	61.0%	27, 269
Native American	0.3%	156
White	27.6%	12, 346
Age Group	Percent	Total
Children 0-15 yrs.	29.4%	13, 114
Teenagers and Young Adults (TAY) 16-25 yrs.	14.8%	6,631
Adults 25-59 yrs.	41.1%	18, 374
Older Adults 60+ yrs.	14.7%	6,562
Gender	Percent	Total
Male	49.5%	22, 104
Female	50.5%	22, 576

Mental Health Clinics in SPA 2

Los Angeles County Department of Mental Health

Oral Health

The Centers for Disease Control and Prevention reports that approximately 40.0% of adults in poverty ages 20 years or more were identified as having at least one untreated decayed tooth compared to 16.0% of adults not living in poverty. In the past decade, the percent of adults 60 years or older now missing all their teeth has decreased from 31.0% to 25.0% (CDC, Oral Health, 2012)²².

Risk factors for tooth decay can be reduced by drinking fluoridated water, avoiding tobacco, limiting alcohol, eating healthy, and regular dental checkups including teeth cleaning (CDC, Oral Health for Adults: Fact Sheet, 2012)²³.

Health district data for SPA 2 shows that 35.2% of adults in the East Valley, 33.0% in Glendale, 21.1% in San Fernando and 30.5% in the West Valley were unable to obtain dental care (including regular checkups) because they could not afford it. In addition, 57.3% of adults and 23.0% children in the East Valley, 48.3% adults and 21.0% of children in Glendale, 39.5% of adults and 19.5% of children in San Fernando, 50.2% of adults and 23.5% children in the West Valley do not have dental insurance¹⁹.

Oral health was identified as one of the top 10 needs in SPA 2 by the community members and health care providers. Dental insurance and access to dental care, especially for the older adults was identified as immediate need in many of the communities in SPA 2.

Dental insurance and access to dental care data are provided below¹⁹.

- 22.0% of the children ages 0-17 years in SPA 2 do not have dental insurance
- 49.0% of adults 18+ years in SPA 2 do not have dental insurance
- 9.6% of children ages 3-17 years in SPA 2 did not obtain dental care (including check-ups) in the past year because they could not afford it
- 29.8% of adults in SPA 2 did not obtain dental care (including check-ups) in the past year because they could not afford it

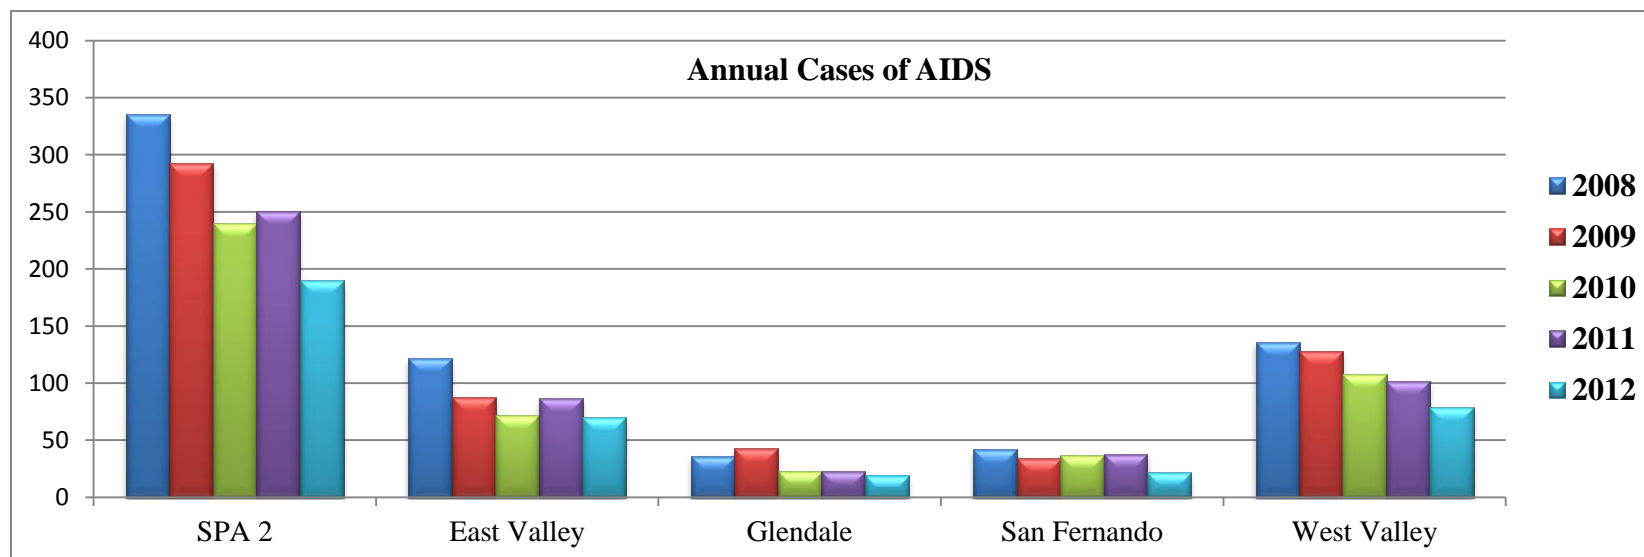

HIV/AIDS

The overall SPA 2 2012 cases of AIDS was 190. This is a decrease from the 2010 cases which is in alignment in AIDS cases in LA County as a whole. West Valley health district had the highest number of AIDS cases (79) whereas Glendale health district had the least number of cases (19). Overall, there is a decline in the number of AIDS cases in SPA 2 from 336 in 2008 to 190 in 2012³⁹.

Death Profile

Leading Causes of Death for 2010

In 2010, there were 11,942 deaths in SPA 2. The SFV accounted for 10,858 (91%) of the total deaths and the SCV accounted for 1,084 (9%) of the total deaths. Both areas experienced a lower number of deaths in comparison to 2008 total deaths (12,110). The top five 2010 leading causes of death were the same for both valleys. Notably in the SFV they remained the same as they were in the last report, however in SCV, unintentional injuries fell out of the top five and was replaced with Alzheimer’s disease. Deaths from the top five leading causes of death (8,281) account for 69.4% of 2010 total deaths.

Deaths among females (5,984) and males (5,598) in SPA 2 are equally distributed. There continues to be disparity by race/ethnicity. According to the Mortality in Los Angeles County (2009) report, the median age of death was 81 years for whites, 79 years for Asian/Pacific Islanders, compared to 69 years for African Americans and Hispanics⁴³.

Leading Causes of Death (All Ages) in the SFV based on number of cases

<i>Cause of Death</i>	<i>% of SFV Deaths</i>	<i>Cases</i>
Heart Disease	29.5%	3,194
Cancer	24.7%	2,681
Stroke/ Cerebrovascular Accident	5.5%	588
Alzheimer’s Disease	4.9%	542
Chronic Lower Respiratory Disease	4.7%	508

Leading Causes of Death (All Ages) in the SCV based on number of cases

<i>Cause of Death</i>	<i>% of SCV Deaths</i>	<i>Cases</i>
Heart Disease	27.3%	296
Cancer	26.8%	290
Stroke/Cerebrovascular Accident	6.6%	71
Alzheimer’s Disease	5.2%	56
Chronic Lower Respiratory Disease	5.1%	55

The table below illustrates a more detailed breakdown of the causes of death in SPA 2 revealing the types of cancer deaths which lead to cancer being the second leading cause of death in SPA 2.

Ten leading causes of death in SPA 2 and LAC, 2010

		SPA 2		LOS ANGELES COUNTY	
<i>Rank</i>	<i>Cause of death</i>	<i>No.</i>	<i>Cause of death</i>	<i>No.</i>	
1	Coronary heart disease	2,852	Coronary heart disease	12,635	
2	Stroke	661	Stroke	3,278	
3	Lung cancer	625	Lung cancer	2,941	
4	Alzheimer's disease	606	Emphysema	2,622	
5	Emphysema	539	Alzheimer's disease	2,242	
6	Pneumonia & influenza	415	Pneumonia & influenza	1,964	
7	Diabetes	343	Diabetes	1,894	
8	Colorectal cancer	281	Colorectal cancer	1,285	
9	Breast cancer	252	Chronic liver disease	1,171	
10	Pancreatic cancer	221	Breast cancer	1,116	
	Diabetes death rate:	17/100,000	Diabetes death rate:	21/100,000	

Source: Los Angeles County (LAC) Department of Public Health (DPH), Office of Health Assessment and Epidemiology. Linked 2010 California DPH Death Statistical Master File for LAC residents, L. Lieb 3/7/13, rev 10/17/13.
 Notes: Diabetes deaths - ICD-10 codes E10-E14. Rates are age-adjusted to the 2000 US population.

Leading Causes of Premature Death

In 2009, almost 45% of adults did not reach the life expectancy rate of 75 years old. Public health uses 75 years of age as the standard cut off for life expectancy. In SPA 2 premature death resulted in 84,124 years of life lost.

Rank	SPA 2 Leading Causes of Premature Death	Years of life lost *
1	Coronary Heart Disease	11,516
2	Suicide	5,131
3	Drug Overdose	4,736
4	Motor Vehicle Crash	4,203
5	Liver Disease	3,609

Source: Los Angeles County Department of Public Health, Annual Mortality Report 2009.

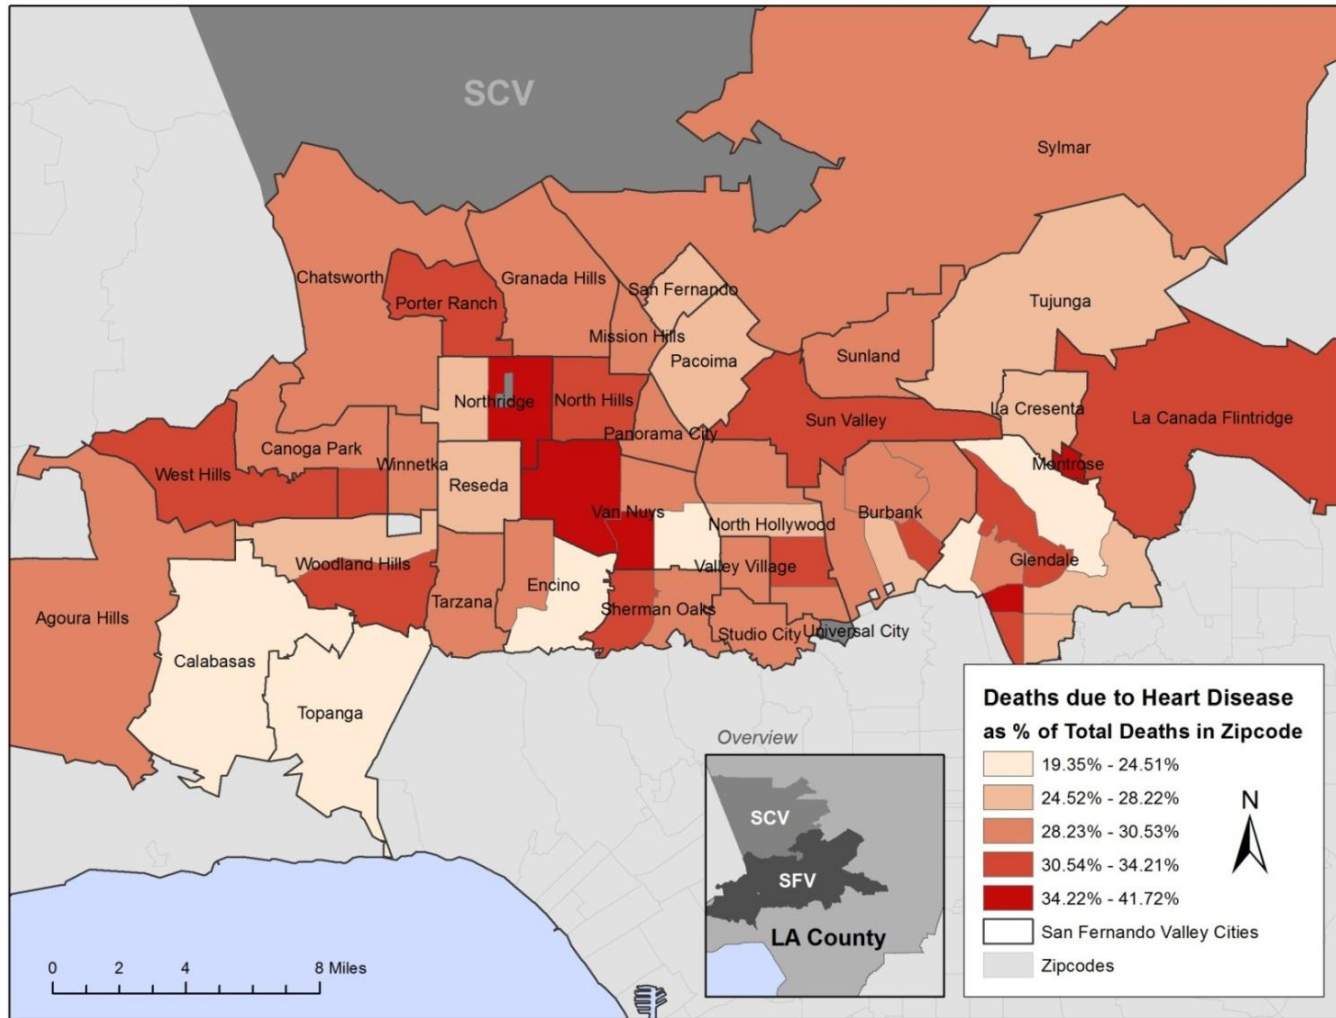

*Note: To quantify the impact of early or premature death we must consider how long a person was expected to live. For this reason, the expected life span was set at 75 years of age, a standard cut-off used in public health. Ideally, most people will live longer than 75 years.

The top five leading causes of premature death vary by gender. Top five for males include coronary health disease, suicide, drug overdose, motor vehicle crash and liver disease. Comparatively the top five for females are breast cancer, coronary heart disease, drug overdose, suicide, and lung cancer.

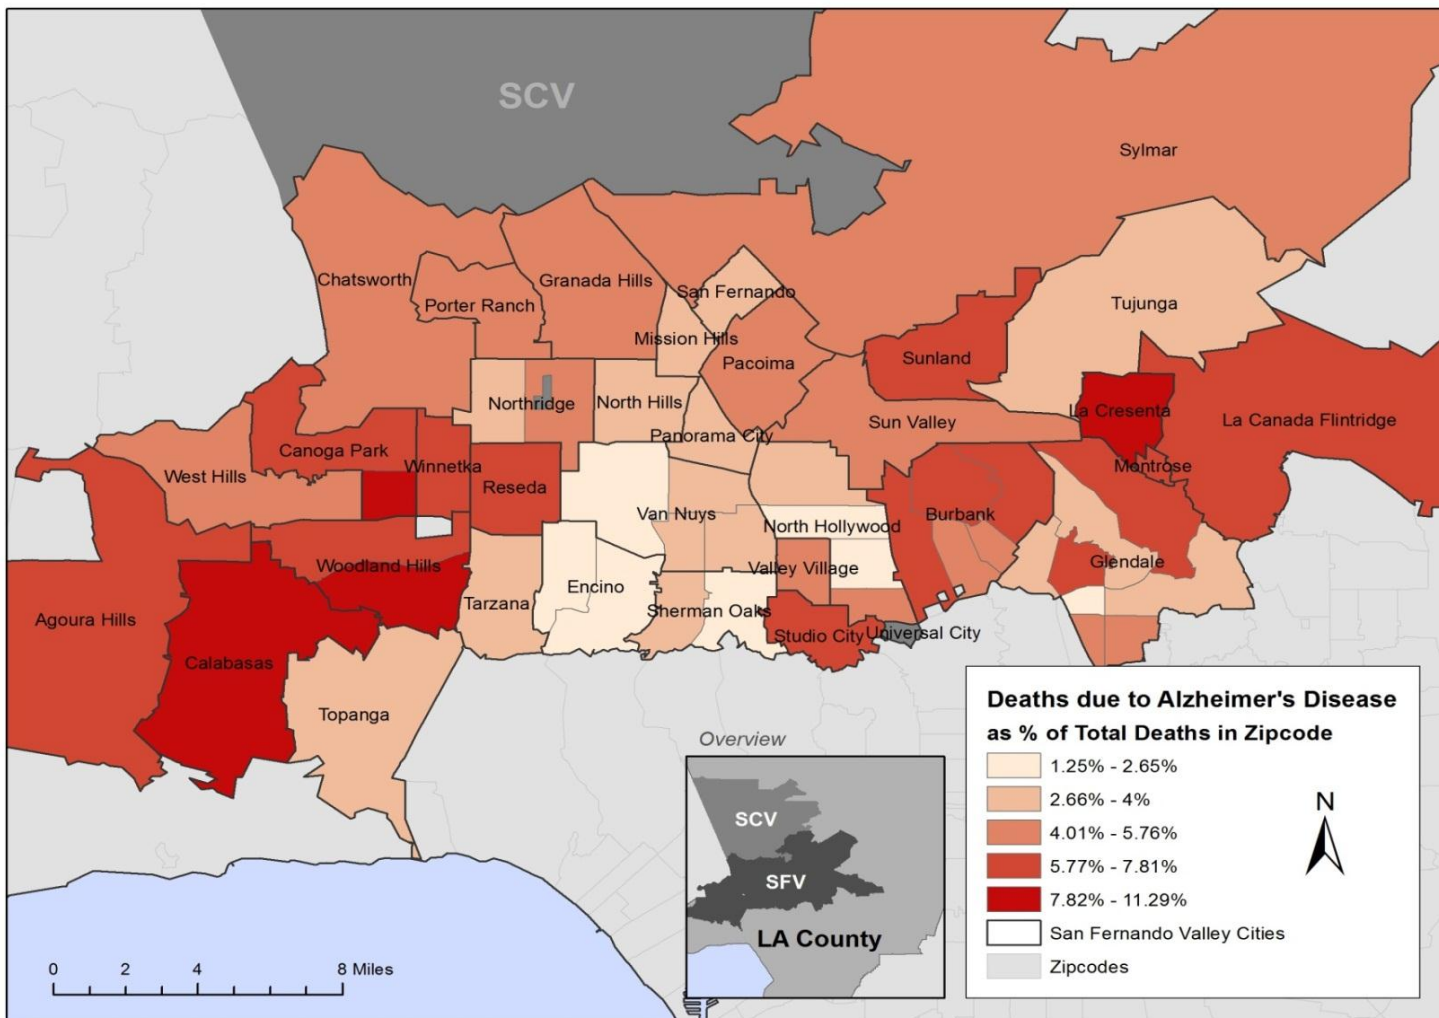

Leading Causes of premature death by Health District

Health District	#1	#2	#3	#4	#5
East Valley	Coronary heart disease	Liver disease	Suicide	Drug overdose	Motor vehicle crash
Glendale	Coronary heart disease	Suicide	Drug overdose	Breast cancer	Colorectal cancer
San Fernando	Coronary heart disease	Drug overdose	Suicide	Motor vehicle crash	Stroke
West Valley	Coronary heart disease	Suicide	Drug overdose	Motor vehicle crash	Homicide
Los Angeles County	Coronary heart disease	Homicide	Motor vehicle crash	Liver disease	Suicide

Health Care Access and Health Status

Uninsured

According to the 2011-2012 California Health Interview Survey, more than 3.5 million Californians did not have health insurance in the past year. Nearly one million in California were unemployed and close to 1.5 million were only employed 20 or fewer hours a week. In Los Angeles County approximately 4.7% (322,000) of the population is unemployed and more than two million people are living under 200% Federal Poverty Level. The unemployment rate in LA County is higher (2011-2012 California Health Interview Survey)⁴⁴.

<i>Description of Issue</i>	<i>SPA 2</i> %	<i>East</i> <i>Valley</i> %	<i>Glendale</i> %	<i>San</i> <i>Fernando</i> %	<i>West Valley</i> %
Percent of children 0-17 who do not have health insurance	4.2%	4.3%	6.6%	2.8%	4.3%
Percent of children 0-17 who do not have dental insurance	22.0%	23.0%	21.0%	19.5%	23.5%
Percent of children 3-17 who were unable to afford dental care and checkups in the past years	9.6%	10.8%	6.9%	12.8%	7.6%
Percent of children 0-17 who were unable to afford to see a doctor for an illness or other health problem in the past year	3.5%	3.20%	-	4.8%	3.6%

-For purposes of confidentiality, results with cell sizes less than 5 are not reported.

Source: 2011 Los Angeles County Health Survey; Office of Health Assessment and Epidemiology, Los Angeles County Department of Public Health¹⁹.

In SPA 2, access to care for adults 18 to 64 years is as following:

- 27.0% of adults do not have health insurance
- 49.0% of adults do not have dental insurance
- 25.1% of adults do not have regular source of health care
- 28.9% of adults have difficulty accessing medical care
- 16.8% of adults did not see a doctor when needed in the past year because they could not afford it
- 29.8% of adults did not obtain dental care (including check-ups) in the past year because they could not afford it
- 8.8% of adults tried accessing mental health care in the past year
- 15.8% of adults did not obtain needed prescription medication in the past year because they could not afford it

Source: 2011 Los Angeles County Health Survey; Office of Health Assessment and Epidemiology, Los Angeles County Department of Public Health¹⁹.

In 2012, SPA 2 had a total of 395,696 uninsured residents, including 369,220 in the SFV and 26,476 in the SCV. In the SFV, the communities where more than 25% of the total population is uninsured include North Hollywood (28.0%), Van Nuys (27.6%), Panorama City (27.6%) and Glendale (26.6%). In the SCV, the communities with the highest percentage of population without insurance include Newhall (19.4%) and Valencia (10.0%)⁵.

SFV communities with a high number of uninsured

Community	2012 Estimated Number of Uninsured	2012 Estimated % of Uninsured in the Individual Community
North Hollywood	43,702	28.0%
Van Nuys	46,184	27.6%
Panorama City	19,298	27.6%
Glendale	45,984	26.6%

SCV communities with a high number of uninsured

Community	2012 Estimated Number of Uninsured	2012 Estimated % of Uninsured in the Individual Community
Newhall	6,840	19.4%
Valencia	6,851	10.0%

Hospital Utilization Data

Data in this section has been compiled from The Office of Statewide Health Planning & Development (OSHPD) Health Care Information Division for calendar year 2012. OSHPD was created in 1978 and is the leader in collecting and making public health care data. Below tables reflect the top 15 inpatient, emergency department, and ambulatory surgery diagnoses for all of SPA 2 (The Office of Statewide Health Planning and Development, 2012)⁴⁵.

Data represents 16 hospitals excluding behavior health facilities and Motion Picture and Television Hospital since it is private, without an emergency room and not open to the public 24/7 as the other general acute facilities. Hospitals include: Encino, Glendale Adventist, Glendale Memorial, Henry Mayo Newhall, Kaiser Panorama City, Kaiser Woodland Hills, Olive View-UCLA Medical Center, Mission Community Hospital, Northridge Hospital, Providence Holy Cross, Saint Joseph, and Tarzana, Sherman Oaks, Valley Presbyterian, Verdugo Hills, and West Hills Medical Center⁴⁵.

The numbers of total emergency department encounters were 678,897 of which an average of 17% resulted in admission to the same hospital. Therefore, 541,705 unique emergency department visits occurred in 2012. Rates of inpatient hospital admissions directly from the emergency department ranged from a high of 28.6% at one site to a low of 11.3% at another site⁴⁵.

Inpatient Hospital Discharge Data

January-June, July- December 2012

Health Status for Children

Health Behavior¹⁹

Eating a nutritious breakfast everyday lowers the risk of obesity and improves academic performance. Among the four health districts in SPA 2, 88.1% (53,000) of children between the ages of 2-17 in Glendale ate breakfast daily, followed by San Fernando at 85.7% (106,000), East Valley at 82.6% (78,000) and West Valley at 82.3% (153,000).

Percent of Children (2-17 years old) Who Reported Eating Breakfast Daily in a Typical Week.

Los Angeles County Health Survey, 2011.

Ate Breakfast Daily	Percent	95% CI			Estimated #
LA County	84.5%	82.9	-	86.2	1,887,000
Health District					
East Valley	82.6%	73.4	-	91.8	78,000
Glendale	88.1%	82.4	-	93.9	53,000
San Fernando	85.7%	80.6	-	90.8	106,000
West Valley	82.3%	76.2	-	88.4	153,000

Source: 2011 Los Angeles County Health Survey; Office of Health Assessment and Epidemiology, Los Angeles County Department of Public Health.

Note: The information presented is based on self-reported data from a randomly-selected, representative sample of 6,013 Los Angeles County parents/guardians. The 95% confidence intervals (CI) represent the margin of error that occurs with statistical sampling, and means that the actual prevalence in the population, 95 out of 100 times sampled, would fall within the range provided.

*The estimate is statistically unstable (relative standard error $\geq 23\%$) and therefore may not be appropriate to use for planning or policy purposes.

In the San Fernando health district, 47.3% of children less than 17 years old ate fast food once a week and 39.4% had at least one sweetened drink a day.

Percent of Children (0-17 years old) Who Consumed Fast Food At Least Once a Week.

Los Angeles County Health Survey, 2011.

Eat Fast Food 1+Times/Week	Percent	95% CI			Estimated #

Health Status for Adults

Health Behaviors¹⁹

Among the health districts within SPA 2, many adults 18+ years old ate fast food at least once a week. In West Valley 40.9% of adults 18+ years old ate fast food at least once a week, followed by Glendale at 36.7%, East Valley at 36.5% and San Fernando at 34.6%.

More adults 18 + years old in East Valley (18.8%) and West Valley (17.9%) ate 5 or more servings of fruits and vegetables compared to adults living in San Fernando (16.8%) and Glendale (13.5%). More adults in San Fernando health district participate in physical activity (68.1%) compared to those living in West Valley (59.7%), East Valley (59.1%) and Glendale (58.8%) health districts. In East Valley there are 14.4% of adults 18+ years old that do not participate in any physical activity, similar to the West Valley (14.3%). In addition, 40.2% of adults 18+ years old in East Valley do not use any walking paths, play grounds or sport fields unlike San Fernando , where 55.0% of adults 18+ years old use these facilities.

SPA 2 Health Districts	Prevalence of Physical Activity** (Aerobic) for Adults 18+ Years Old
San Fernando	68.1%
West Valley	59.7%
East Valley	59.1%
Glendale	58.8%

***To meet Physical Activity Guidelines for aerobic activity at least one of the following at least one of the following criteria must be fulfilled: 1) Vigorous activity for at least 75 minutes a week, 2) Moderate activity for at least 150 minutes a week, or 3) A combination of vigorous and moderate activity for at least 150 minutes a week. [REFERENCE: Physical Activity Guidelines Advisory Committee. Physical Activity Guidelines Advisory Committee Report, 2008. Washington, DC: U.S. Department of Health and Human Services, 2008. <http://www.health.gov/paguidelines/pdf/paguide.pdf>]*

Health Status¹⁹

Among the health districts in SPA 2, Glendale had the highest percentage of adults 18+ years old having a disability (27.4%). Disability is defined as having one of the following: 1) limited activity because of physical, mental, or emotional problem(s), 2) health problem requiring use of special equipment, 3) self-perception of being disabled. Adults 18+ years old living in Glendale reported the highest average number of unhealthy mental or physical days (7.4), compared to East Valley at 6.4, West Valley at 5.4 and San Fernando at 4.9.

Part II Child/Spousal Abuse Simple Assaults not included in Part I aggravated Assaults above to comply with the FBI's Uniform Crime Reporting guidelines.

Statistics are based on the date the crime or arrest occurred. Statistics are preliminary and subject to further analysis and revision

Prepared by: COMPSTAT Unit

*Grand Theft Auto. **Burglary/theft from motor vehicle. From 2011 to 2012 there was a noticeable decrease in the amount of incidents and arrests among the adults and Juvenile population. Adult arrests have gone down by 8% and Juvenile arrests by 37%. Although the amount of arrests have gone down, it is still important to mention the most prevalent type of arrests. Juvenile arrests are at its highest when it comes to misdemeanor (128) and larceny theft (80). Adult arrests remain high amongst Narcotic (602) and warrant arrests (475).

<http://cityplanning.lacity.org/dru/LocI/LocRpt.cfm?geo=CD&sgo=CT>

Council District 7 has a higher acreage of parks per 1,000 residents compared to all other council districts. Council district 4 has the least amount of green space with only 1.01 acres per 1,000 residents. Lack of green space creates barriers for physical activity. Community residents were concerned about lack of safe parks in their neighborhoods and reported that many of the parks do not have proper lighting in the evening hours for them to feel safe to go walking or to let their children play in the parks.

Taking the community feedback into consideration, a list of local parks and green space directory has been created to accompany this report. A comprehensive community asset mapping can be found on VCCC website at www.valleyccc.org by the end of November, 2013.

APPENDIX A: COMMUNITY INPUT

San Fernando and Santa Clarita Hospital Service Area

Individuals with special knowledge of or expertise in public health

Name (Last, First, Academic Distinction)	Title	Affiliation	Description of public health knowledge/expertise	Date of Consult	Type of Consult
Baker, Shiarron, BS	Community Liaison Nurse	LAC Department of Public Health	Low-income families for the LAC DPH as a district nurse	11/13/2012	Key Informant Interview
Basiratmard, Siamak, MD	Medical Doctor Internal Medicine	LAC DHS Olive View UCLA Medical Center	Safety net hospital and/or clinic	9/5/2012	Community Forum
Blank, Joseph, MD	Medical Director	Ambulatory Care Network OliveView Mid Valley Comprehensive Health Center	Served as a PI director, employee Health Administrator	9/5/2012	Community Forum
Cheng, Mindy, MD	Medical Doctor Internal Medicine	LAC DHS Olive View UCLA Medical Center	Safety net hospital and/or clinic	9/5/2012	Community Forum
Cheung, Shung, MD	Medical Doctor, Pediatrician	LAC DHS Olive View UCLA Medical Center	Safety net hospital and/or clinic	9/5/2012	Community Forum
Chin, Mun, MD	Medical Doctor Internal Medicine	LAC DHS Olive View UCLA Medical Center	LAC DHS Olive View UCLA Medical Center	9/5/2012	Community Forum
Cope, Jacqueline, MD	Medical Doctor Family Medicine	LAC DHS Olive View UCLA Medical Center	Safety net hospital and/or clinic	9/5/2012	Community Forum
Darie, Silvia, MD	Medical Doctor Internal Medicine	LAC DHS Olive View UCLA Medical Center	Safety net hospital and/or clinic	9/5/2012	Community Forum

APPENDIX C: COMMUNITY ASSETS AND RESOURCES

SPA 2 has a multitude of resources to help address the community's health needs. A detailed Asset Mapping supplement can be found on our website at www.valleyccc.org.

Asset mapping was categorized by type to service provided.

APPENDIX D: PRIMARY DATA COLLECTION INSTRUMENTS

Focus Group Questions

Problems and concerns

1. What are the most significant health problems in the community? What ages and ethnicities are most affected by the issue?
2. What is the most significant educational/environmental/socio-economic factors affecting the community. Who is most impacted?
3. What are the most risky health behaviors affecting the community? What age and ethnicity is most impacted?
4. What other problems or concerns are affecting the community?

Resources and Barriers

1. Reviewing the list of problems you mentioned, what are some the existing community resources to support the community to address the issues?
2. What are some of the barriers to accessing these resources?

Solutions

1. Suggest some possible solutions to the issues

Prioritization

1. Again reviewing the list, what are some of your suggestions for prioritization of the concerns/solutions listed?
2. Suggest methods for prioritization of issues?
3. What can be realistically accomplished?
4. Please prioritize the top 10 issues and concerns that you think need immediate attention.

LACDHS Clinician Focus Group

- 1.) Physician's Age (multiple choice)
 - a. 25-34 years
 - b. 35-44 years
 - c. 45-54 years
 - d. 55-64 years
 - e. 65+
- 2.) Physician Specialty (fill in the blank)
- 3.) Physician Office Location- Choose all that apply (multiple choice)
 - a. OliveView
 - b. MVCHC
 - c. Glendale HC
 - d. SFHC
- 4.) What is your perception of the health of your patients? (multiple choice)
 - a. Very Poor
 - b. Poor
 - c. Fair
 - d. Average
 - e. Good
 - f. Excellent
- 5.) What percentage of your patients do you think are uninsured? (multiple choice)
 - a. 0-5%
 - b. 5-10%
 - c. 10-25%
 - d. 25-50%
 - e. 50-75%
 - f. More than 75%
- 6.) What do you think are the risky behaviors of your patients? (multiple choice)
 - a. Smoking
 - b. Alcoholism
 - c. Narcotics
 - d. Prescription drug abuse
 - e. Over the counter drug abuse
 - f. Poor diet
 - g. Sedentary lifestyle
 - h. Other

- 7.) What are the chronic diseases you see in the low-income communities? Choose all that may apply (multiple choice)
- a. Diabetes
 - b. Hypertension
 - c. Cardiovascular Disease
 - d. Stroke
 - e. Cancer
 - f. Other
- 8.) In the 2010 CHNA we identified the following areas as greatest need- Rank the top Four (priority ranking)
- a. Housing that is affordable
 - b. Home care and long term care
 - c. Dental care: Affordable & Accessible
 - d. Health insurance that is affordable in portable
 - e. Mental health services: Affordable and accessible
 - f. Transportation
 - g. Primary medical care
 - h. Chronic disease management
 - i. Case management for individuals and families
 - j. Wellness, screening and prevention programs
- 9.) How many years of experience do you have working with vulnerable population? (multiple choice)
- a. 0-1 years
 - b. 1-2 years
 - c. 2-3 years
 - d. 3-4 years
 - e. 4-5 years
 - f. 5+

Valley Care Community Consortium (VCCC)

2013 Community Health Survey

7515 Van Nuys Blvd 5th Floor

Van Nuys, CA 91405

To preserve your confidentiality, do not put your name or other personal identifiers on the survey. If you are at least 18 years of age, please take a few minutes to complete the survey below. The purpose of the survey is to create a snapshot of the health of the communities in which you live. Information gathered by the Community Health Needs Assessment can then be used for planning, programs and community benefit resource allocation. The results of the questionnaire will help identify problematic key issues that will be addressed through community input. If you have any questions about this survey, please call 818-947-4040. Make your opinion count by completing this survey. Thank you.

1) Zip code: _____

2) City: _____

3) Age: (Please check one)

____ 25 or less

____ 26-39

____ 40-54

____ 55-64

____ 65 or older

4) Sex: (Please check one)

____ Female

____ Male

5) Ethnic group you most identify with: (Please check one)

____ African America/African Americans

____ Asian/Pacific Islander

____ Hispanic/Latino

____ Native American

____ White/Caucasian

____ Other: _____

6) Marital Status: (Please check one)

____ Married

____ Divorced/Separated

____ Single

____ Widow/Widower

____ Domestic Partners

7) Education: (Please check one)

- Less than High School Some college
 High School diploma/GED College degree or higher

8) What is your household income? (Check one)

- Less than \$20,000 \$20,000 to \$39,999
 \$40,000 to \$59,999 \$60,000 to \$79,999
 \$80,000 or higher

9) How do you primarily pay for your health care? (Check all that apply)

- Cash (No Insurance) Healthy Way LA
 Health insurance (e.g., private insurance, Humana, Anthem, etc.) Veterans' Administration/Military
 Medicaid Don't go to a Doctor because I can't pay
 Medicare with or without Medicare supplemental coverage Other: _____

10) During the past 12 months, was there any time when you needed to see a doctor, but could not because of the cost? (Check one)

- Yes No

11) During the past 12 months, was there any time that you did not have any health insurance or coverage? (Check one)

- Yes No

12) Where do you go to most often when you are sick or need advice about your health? Please check only one. (Check one)

- Doctor's Office/Family Doctor Community Clinic
 Local health department Hospital emergency room
 Urgent care center Free Clinic
 Hospital outpatient clinic Other: _____

13) Which of the following best describes your typical daily physical activity level? (Check one)

- No Activity Active
 Limited Very Active
 Moderate

14) Compared to a year ago, how is your health now? (Check one)

- Much better now than 1 year ago
- Better now than 1 year ago
- About the same
- Worse now than 1 year ago

15) How would rate your own personal health? (Check one)

- Excellent
- Very Good
- Good
- Fair
- Poor

16) Considering all types of alcoholic beverages, how many times during the past 30 days did you have 5 or more drinks in a day? (Check one) (8oz wine, 12oz beer, 1.5oz shot)

- None
- 1-5 times
- 6-10 times
- More than 10 times

17) How many cigarettes do you smoke per day? (Check one)

- Per Day

18) Have you ever been told by a doctor, nurse, or other health professional that you are overweight or obese?

- Yes No

19) Have you ever been told by a doctor, nurse, or other health professional that you have high blood pressure?

- Yes No

20) Have you ever been told by a doctor, nurse, or other health professional that your blood cholesterol is high?

- Yes No

21) Have you ever been told by a doctor that you have diabetes?

- Yes Yes, but only during pregnancy No

22) Have you ever been diagnosed with a mental health disorder?

Yes No

23) How do you rate your mental health? (Select one choice that fits best)

Excellent Very Good Good Fair Poor

24) On how many of the past 7 days did you exercise or participate in physical activity for at least 20 minutes that made you sweat or breathe hard, such as basketball, soccer, running, swimming laps, fast bicycling, fast dancing, or similar aerobic activities? (Check one)

0 1 2 3 4 5 6 7

25) Yesterday, how many times did you eat vegetables? (Check one)

DO count: Cooked and uncooked vegetables; salads; and boiled, baked and mashed potatoes.

DO NOT count: French fries, potato chips, or lettuce that is on a sandwich or sub.

I did not eat vegetables yesterday

1 time 2 times 3 times 5 or more

26) Yesterday, how many cans or glasses of non-diet soda did you drink? (Check one)

DEFINITION: A non-diet soda is a soda with sugar in it, such as Coke, Pepsi®, Sprite®, ginger ale, or root beer. Count a 20-ounce bottle as 2 glasses.

I did not drink any non-diet soda yesterday

2 cans or glasses

1 can or glass

3 or more cans or glasses

27) How often do you eat at fast food restaurants?

4 or more times per week

Less than 1 per week

1-3 per week

Never

28) What type of medical provider do you use for routine care? (Check all that apply)

Family doctor

Emergency Room/Hospital

Community Health Center/Clinic

Specialist

Health Department

Other: _____

29) What concerns you most about health within your community? (Select 5 concerns; rate 1-5 with 1 being the most concerning and 5 being the least concerning)

- | | | |
|---|--|--|
| <input type="checkbox"/> Aging problems | <input type="checkbox"/> Infant death | <input type="checkbox"/> High blood Pressure |
| <input type="checkbox"/> Cancers | <input type="checkbox"/> Infectious Disease | <input type="checkbox"/> HIV/AIDS |
| <input type="checkbox"/> Child abuse/neglect | <input type="checkbox"/> Mental health problems | <input type="checkbox"/> Obesity |
| <input type="checkbox"/> Dental Problems | <input type="checkbox"/> Motor vehicle crash injuries | <input type="checkbox"/> Teenage pregnancy |
| <input type="checkbox"/> Diabetes | <input type="checkbox"/> Rape/Sexual assault | <input type="checkbox"/> Homicide |
| <input type="checkbox"/> Domestic violence | <input type="checkbox"/> Respiratory diseases | <input type="checkbox"/> Other: _____ |
| <input type="checkbox"/> Firearm-related injuries | <input type="checkbox"/> Sexually transmitted diseases | |
| <input type="checkbox"/> Heart disease and stroke | <input type="checkbox"/> Suicide | |

30) What source do you primarily use to get your health-related information? (Check one)

- | | |
|---|--|
| <input type="checkbox"/> Friends and family | <input type="checkbox"/> Hospital |
| <input type="checkbox"/> Doctor/nurse | <input type="checkbox"/> Health department |
| <input type="checkbox"/> Pharmacist | <input type="checkbox"/> Help lines |
| <input type="checkbox"/> Church | <input type="checkbox"/> Books/magazines |
| <input type="checkbox"/> Internet | <input type="checkbox"/> Other: _____ |
| <input type="checkbox"/> My child's school | |

31) How safe is your neighborhood?

- | | |
|--|--|
| <input type="checkbox"/> Very safe | <input type="checkbox"/> Somewhat unsafe |
| <input type="checkbox"/> Somewhat safe | <input type="checkbox"/> Very safe |

32) How safe is it to walk or play in the neighborhood park?

- | | |
|--|--|
| <input type="checkbox"/> Very safe | <input type="checkbox"/> Somewhat unsafe |
| <input type="checkbox"/> Somewhat safe | <input type="checkbox"/> Very unsafe |

33) Are you satisfied with the health care system in your County? (Consider health care options, access, cost, availability, quality, etc.) (Circle One)

Very Unsatisfied 1 2 3 4 Very Satisfied

34) What 2 health topic(s)/ disease(s) would you like to learn more about?

35) What services are needed in your community to create a healthier community?

Please return completed survey to person conducting the survey or by mail to VCCC 7515 Van Nuys Blvd. Van Nuys, CA 91405 Attention: Joni Novosel

Thank you for your time and valuable feedback.

Valley Care Community Consortium (VCCC)

2013 Community Health Survey

7515 Van Nuys Blvd 5th Floor

Van Nuys, CA 91405

Para preservar su confidencialidad, no ponga su nombre u otros identificadores personales en la encuesta. Si usted tiene por lo menos 18 años de edad, por favor tome unos minutos para completar la siguiente encuesta. El propósito de la encuesta es de crear una instantánea de la salud en las comunidades en las que viven. La información recogida por Evaluación de Necesidades Comunitarias De Salud se puede utilizar para la planificación de programas y beneficios de la comunidad de asignación de recursos. Los resultados de la encuesta ayudará a identificar claves problemáticas que se abordarán a través de aportes de la comunidad. Si usted tiene alguna pregunta sobre esta encuesta, por favor llame al 818-947-4040. Haga que su opinión cuente al completar esta encuesta. Gracias.

1) Código Postal: _____

2) Ciudad: _____

3) Edad: (por favor marque uno)

____ 25 o menos ____ 26-39
____ 40-54 ____ 55-64 ____ 65 años o más

4) Sexo: (Por favor marque uno)

____ Masculino ____ Femenino

5) El grupo étnico se identifica más con: (Marque uno)

____ Hispano/Latino ____ Nativo Americano
____ White/Caucásico ____ Otro: _____

6) Estado civil: (Por favor marque uno)

____ Casado ____ Divorciado/Separado ____ Soltero ____ Viuda/Viudo ____ Viven juntos/no casado(a) ____ Parejas de Hecho

7) Educación: (Marque uno)

Menos de la Escuela Secundaria
 Diploma de Escuela Secundaria / GED

Alguna experiencia el la universidad
 Titulo de la universidad o superior

8) ¿Cuál es su ingreso familiar? (Marque uno)

Menos de \$ 23,050
 \$ 23,051 a \$ 40,338
 \$ 40,339 a \$ 57,625
 \$ 57,626 a \$ 80,675
 \$ 80,676 a \$ 92,200
 Más de \$ 92,201

9) ¿Cómo principalmente paga por su cuidado de salud? (Por favor, marque todas las que apliquen)

Cash (No seguros)
 Seguro de Salud (por ejemplo, seguro privado, Humana, Anthem, etc.)
 Medicaid
 Medicare con o sin cobertura de Medicare suplementario
 Healthy Way LA
 Administración de Veteranos/ Militar
 No va al médico porque no pueden pagar
 Otros: _____

10) Durante los últimos 12 meses, ¿hubo algún momento en que necesitó consultar a un médico, pero no pudo debido al costo? (Marque uno)

Si No

11) Durante los últimos 12 meses, ¿hubo algún momento en que usted no tubo seguro de salud o cobertura? (Marque uno)

Si No

12) Donde usted va la mayoría de veces cuando usted está enfermo o necesita un consejo sobre su salud? Por favor, marque sólo una. (Marque uno)

Oficina de Doctor/Doctor Familiar
 Clínica de la Comunidad
 Departamento de salud local
 Sala de emergencia
 Centro de Atención Urgente
 Clínica Gratuita
 Hospital de pacientes externos
 Otros: _____

13) ¿Cuál de las siguientes opciones describe mejor el típico nivel diario de actividad física? (Marque uno)

No Actividad

Activo

Limitado

Muy activo

Moderado

14) En comparación con hace un año, ¿cómo está su salud? (Marque uno)

Mucho mejor ahora que hace 1 año

Casi igual que hace 1 año

Mejor ahora que hace 1 año

Peor ahora que hace 1 año

15) ¿Cómo calificaría su salud personal? (Marque uno)

Excelente

Razonable

Muy Bien

Mal

Bien

16) Teniendo en cuenta todos los tipos de bebidas alcohólicas, ¿cuántas veces en los últimos 30 días a tomado 5 o más bebidas en un día? (Marque uno) (8 oz de vino, cerveza 12oz, una copa de 1.5 oz)

Ninguna vez

6-10 veces

1-5 veces

Mas de 10 veces

17) ¿Cuántos cigarrillos fuma al día? _____

18) ¿Alguna vez le ha dicho un medico, enfermera u otro profesional de salud que usted esta sobrepeso u obeso?

Sí No

19) ¿Alguna vez le ha dicho un medico, enfermera u otro profesional de salud que tiene la presión arterial alta?

Sí No

20) ¿Alguna vez le ha dicho un medico, enfermera u otro profesional de salud que su colesterol es alto?

Sí No

21) ¿Alguna vez le ha dicho un médico que tiene diabetes?

Sí

Sí, pero sólo durante el embarazo

No

22) ¿Alguna vez ha sido diagnosticado con un trastorno de salud mental?

_____ Yes _____ No

23) ¿Cómo calificaría usted su salud mental? (Seleccione una opción que se ajusta mejor)

_____ Excelente _____ Muy bien _____ Bien _____ Razonable _____ Mal

24) ¿En cuántos de los últimos 7 días a hecho ejercicio o participo en actividad física por lo menos 20 minutos que lo/la hizo sudar o respirar fuerte, como el baloncesto, el fútbol, correr, natación, bicicleta rápida, baile rápido, o actividades aeróbicas similares?

(Marque uno)

_____ 0 _____ 1 _____ 2 _____ 3 _____ 4 _____ 5 _____ 6 _____ 7

25) Ayer, ¿cuántas veces comiste verduras? (Marque uno)

SI cuente: los vegetales cocidos y crudos, ensaladas, hervidas, al horno y puré de papa.

NO cuente: papas francesas, papas fritas, lechuga o que está en un sándwich o sub.

_____ No Comí verduras ayer

_____ 1 Vez _____ 2 Veces _____ 3 Veces _____ 4 veces o mas

26) Ayer, ¿cuántas latas o vasos gaseosos de dieta bebió? (Marque uno)

DEFINICIÓN: Un refresco de dieta es un refresco con azúcar, como Coca-Cola, Pepsi®, Sprite®, ginger ale o cerveza de raíz.

Contar un 20 - oz botella como 2 vasos.

_____ No tome bebida gaseosa no dietética ayer

_____ 2 Latas o vasos

_____ 1 Lata o vidrio

_____ 3 O más latas o vasos

27) ¿Con qué frecuencia usted come en restaurantes de comida rápida?

_____ 4 veces o más por semana

_____ 1-3 por semana

_____ Entre 1 vez por semana y menos que 4 veces por mes

_____ Menos de 1 por mes

_____ Nunca

28) ¿Qué tipo de proveedor medico utiliza usted para la atención medica rutinal? (Marque todos los que apliquen)

_____ Médico Familiar

_____ Sala de Emergencia/Hospital

_____ Centro de Salud Comunitario/ Clínica

_____ Especialista

_____ Departamento de Salud

_____ Otro: _____

29) ¿Qué le preocupa más acerca de la salud en su comunidad? (Seleccione 5 que mas le preocupan con el 1 refiriéndose al mas preocupante y 5 como el menos preocupante)

33) ¿Está usted satisfecho con el sistema de salud en su condado? (Tenga en cuenta las opciones de cuidado de la salud, el acceso, el costo, la disponibilidad, calidad, etc.) (Marque uno)

Muy insatisfecho 1 2 3 4 Muy Satisfecho

34) ¿Qué 2 tema de salud/enfermedad(s) le gustaría aprender más?

35) ¿Qué servicios se necesitan en su comunidad para crear una comunidad más saludable?

Por favor, devuelva la encuesta completada a la persona que realiza la encuesta o por correo a VCCC 7515 Van Nuys Blvd., Van Nuys, CA 91405 Atención: Joni Novosel

Church of the way –community forum

1. What age bracket do you fall in(multiple choice)
 - a. 25 or less
 - b. 26-39
 - c. 40-54
 - d. 55-64
 - e. 65 or over

2. What is you gender?
 - a. Male
 - b. Female

3. Ethnic group you most identify with?
 - a. African American
 - b. Hispanic/Latino
 - c. White/Caucasian
 - d. Asian/Pacific Islander
 - e. Native American
 - f. Other

4. What is you marital status?
 - a. Married/living together
 - b. Married/currently separated
 - c. Not married/living together
 - d. Not married/single

5. What is your highest level of education?
 - a. Less than high school
 - b. High school diploma GED
 - c. Some college
 - d. Associate degree
 - e. Undergraduate
 - f. Graduate
 - g. Post Graduate
 - h. Other

6. How do you pay for health care?
 - a. Pay cash (no insurance)
 - b. Medicaid
 - c. Veterans Administration
 - d. Health Insurance
 - e. Medicare
 - f. Indian health services
 - g. Other

7. What do you think are the three most important factors for a “healthy community” (priority ranking)
- a. Good place to raise children
 - b. Low crime/safe neighborhoods
 - c. Good schools
 - d. Parks and recreations
 - e. Clean environment
 - f. Affordable housing
 - g. Good jobs and healthy economy
 - h. Access to health care(e.g. family doctor)
 - i. Arts and cultural events
 - j. Other
8. What do you think are the three most important “Health Problems” in our community(priority ranking)
- a. Cancer
 - b. Dental problems
 - c. Diabetes
 - d. Heart disease and stroke
 - e. High blood pressure
 - f. Mental health problems
 - g. Respiratory/lung disease
 - h. Sexually Transmitted Diseases
 - i. Teenage Pregnancy
 - j. Other
9. What do you think are the three most important Risky Behaviors in our community?
- a. Alcohol abuse
 - b. Overweight
 - c. Dropping out school
 - d. Drug abuse
 - e. Lack of exercise
 - f. Poor eating habits
 - g. Tobacco use
 - h. Not using birth/child control
 - i. Unsafe sex
 - j. Other
10. How would you rate your own personal health?
- a. Very unhealthy
 - b. Unhealthy
 - c. Somewhat healthy
 - d. Healthy
 - e. Very Healthy
11. How would you rate our community as a “health Community”?
- a. Very unhealthy
 - b. Unhealthy
 - c. Somewhat healthy
 - d. Healthy
 - e. Very Healthy

12. Which of the health problems affect you? (rate them in order of impact on your life from most to least)(multiple choice)

- a. Cancer
- b. Diabetes
- c. Heart disease
- d. High blood pressure
- e. High cholesterol
- f. HIV/AIDS
- g. Mental Health issues
- h. Overweight
- i. STD
- j. Stroke

13. If you have high blood pressure do you check it regularly?(at least weekly)(multiple choice)

- a. Yes
- b. No
- c. Not applicable

14. If you have diabetes do you check your blood sugar regularly (at least bi-weekly)?

- a. Yes
- b. No
- c. Not applicable

15. Which of the following describes your weight?

- a. Overweight
- b. Underweight
- c. Appropriate

16. Do you think you use or participate in any of the following in excess?

- a. Alcohol
- b. Gambling
- c. Tobacco
- d. Prescription drugs
- e. Recreational drugs
- f. Unsafe driving
- g. Food
- h. None of the Above

17. How well do you rate your sleep?

- a. I sleep well and feel refreshed in the morning
- b. I sleep but feel it is not sufficient rest
- c. I do not sleep well

18. How do you your mental health?

- a. Balanced
- b. Stressed
- c. Overwhelmed
- d. Depressed

19. If you have children (under age 12) what do you consider to be their greatest health issues?
- a. Poor eating habits
 - b. Minimal or absence of exercise
 - c. No safe place to play outside
 - d. Unable to access medical care
 - e. Unable to access dental care
 - f. School or behavioral
 - g. I do not have any concerns
 - h. This does not apply to me
20. Do you have a support system with whom you can talk and share?
- a. Yes
 - b. No

APPENDIX E: REFERENCES/BIBLIOGRAPHY

- ¹ Los Angeles County Internal Service Department. (2011). *Population Estimates; July 2011*.
LA County Department of Internal Services provides population estimates for all eight service planning areas in LA County.
- ² World Health Organization (WHO). (2011). *Chronic Diseases; 2011*. Retrieved from http://www.who.int/topics/chronic_diseases/en/
World Health Organization defines chronic diseases as “*Diseases of long duration and generally slow progression; such as, heart disease, stroke, cancer, chronic respiratory diseases and diabetes, and are by far the leading cause of mortality in the world*”.
- ³ Centers for Disease Control and Prevention (CDC). (2011). *National Diabetes Fact Sheet; 2011*. Retrieved from <http://www.cdc.gov/diabetes/pubs/factsheet11.htm>.
The fact sheet on diabetes on the CDC website explains the condition as “*Diabetes is a group of diseases marked by high levels of blood glucose resulting from defects in insulin production, insulin action, or both. Diabetes can lead to serious complications and premature death, but people with diabetes, working together with their support network and their health care providers, can take steps to control the disease and lower the risk of complications*”. The information was retrieved to explain what diabetes is and the risk factors associated with the condition.

Describes treatment options, types of cancer doctors, second opinion, follow-up care, and sources of support for person recently diagnosed with cancer.
- ¹⁵ National Cancer Institute (NCI). (2012). *What You Need to Know about Colorectal Cancer; 2012*. Retrieved from <http://www.cancer.gov/cancertopics/wyntk/colon-and-rectal>.
In 2013, about 143,000 people in the United States will be diagnosed with colorectal cancer. Reports on risk factors, screening, symptoms, diagnosis, and treatment.
- ¹⁶ Centers for Disease Control and Prevention (CDC). (2013). *Basic Information about Lung Cancer; July 2013*. Retrieved from http://www.cdc.gov/cancer/lung/basic_info/.
Lung cancer is the leading cause of cancer death and the second most diagnosed cancer in both men and women in the United States. After increasing for decades, lung cancer rates are decreasing nationally, paralleling decreases in cigarette smoking.
- ¹⁷ Centers for Disease Control and Prevention (CDC). (2013). *Basic Information about Prostate Cancer; July 2013*. Retrieved from http://www.cdc.gov/cancer/prostate/basic_info/index.htm.
Prostate cancer is the most common cancer in men. In the United States in 2009,* 206,640 men were diagnosed with prostate cancer, and 28,088 men died from it. CDC provides men, doctors, and policymakers with the latest information about prostate cancer.
- ¹⁸ Centers for Disease Control and Prevention (CDC). (2013). *Uterine Cancer; September 2013*. Retrieved from <http://www.cdc.gov/cancer/uterine/index.htm>.
All women are at risk for uterine cancer, but the risk increases with age. When uterine cancer is found early, treatment is most effective.

¹⁹ Los Angeles County Health Survey; Office of Health Assessment and Epidemiology, Los Angeles County Department of Public Health; 2011. OHAE website: www.lapublichealth.org/ha
Note for 2011 Adult LACHS data: Estimates are based on self-reported data by a random sample of 8,036 Los Angeles County adults, representative of the adult population in Los Angeles County. The 95% confidence intervals (CI) represent the variability in the estimate due to sampling; the actual prevalence in the population, 95 out of 100 times sampled, would fall within the range provided.

Note for 2011 Child LACHS data: The information presented is based on self-reported data from a randomly-selected, representative sample of 6,013 Los Angeles County parents/guardians. The 95% confidence intervals (CI) represent the margin of error that occurs with statistical sampling, and means that the actual prevalence in the population, 95 out of 100 times sampled, would fall within the range provided.

²⁰ Los Angeles County Department of Public Health, Office of Health Assessment and Epidemiology. Key Indicators of Health by Service Planning Area; 2013.

This report describes indicators for each of Los Angeles County's Service Planning Areas (SPAs) and the County overall. It also compares the health measures of Los Angeles County residents with those of the United States population, and with Healthy People 2020 goals, which represent health standards our nation is trying to achieve within this decade.

²¹ World Health Organization (WHO). (2012). *Obesity and overweight fact sheet; 2012*. Retrieved from. <http://www.who.int/topics/obesity/en/>.

Overweight and obesity are defined as abnormal or excessive fat accumulation that may impair health. The condition is largely preventable, supportive environments and communities are fundamental in shaping people's choices.

²²Centers for Disease Control and Prevention (CDC). (2013). *Oral Health; July 2013*. Retrieved from <http://www.cdc.gov/oralhealth/>. CDC's Division of Oral Health (DOH) works to improve the oral health of the nation and reduce inequalities in oral health by helping states improve their oral health programs, and extending the use of proven strategies to prevent oral disease

²³Centers for Disease Control and Prevention (CDC). (2013). *Oral Health for Adults: Fact Sheet; July 2013*. Retrieved from http://www.cdc.gov/OralHealth/publications/factsheets/adult_oral_health/adults.htm.

The baby boomer generation will be the first where the majority will maintain their natural teeth over their entire lifetime, having benefited from water fluoridation and fluoride toothpastes.
